DIRT BIKE SERVICE MANUALS

What sets Haynes Manuals apart is the attention to detail that goes into the production of each book. Every manual is written from hands-on experience based on a complete teardown, which is the step-by-step procedure of dismantling a particular vehicle part-by-part. This is followed by the detailed rebuilding of the specific model it documents. Writing each manual takes 30 man-weeks, with authors working as teams to shorten the production time and avoid fatigue during the difficult process. Hundreds of photographs accompany each manual's step-by-step instructions. The books are written from the actual experience of Haynes' own expert personnel using only a basic set of tools and presented in a style that any DIYer can follow, even a beginner. The DIYer can save a great deal of time and money, not to mention feeling proud of the job, by using a Haynes book..

- The "cups" eliminate possible damage to grips.
- The new cups hold the cross straps and your tie downs further out on the bars to better clear a wider variety of fairings.
- The new cup is even easier and quicker to install correctly.
- The cups are sized to fit the fattest grips in the industry
- The steel D-ring "lay-ins" prevent losses even after many years of weather and abuse begin to weaken the Polycarbonate cup.
- We are using heavier thread with more stitches in the pattern for greater strength and the contrasting thread color aids in detecting flaws or damage.

GRIP TAPE SHEETS

Features one (1) 12"x18" grip sheet on 12 mil. vinyl

Uses a high-tack adhesive and is ideal for protecting graphics and/or frame grip traction.

Recommended for lower areas of bike that pants do not contact (frame, frame guards, etc.)

Medium grip is less abrasive - excellent for upper areas of bike (shrouds, side panels, etc.)

MUD FREE FOAM KIT

An ATV can collect over 300 pounds of mud in just a single race. A motorcycle can collect over 100 pounds. This added weight slows you down, effecting your stamina and control. Riders spend a lot of time and money reducing the weight of ATV or motorcycle and a little mud can add it all back on.

- Kit contains 3 cut-to-fit sheets, enough for one sport ATV or two motorcycles.
- Can be used for more than one race
- Can be power washed
- Can be removed when not needed

UNIVERSAL BAR RISERS

Need a little bump in bar height? We've got just what you need. Our Universal Bar Riser raises 7/8" bars either 1" (25mm) or 1.6" (40mm). The unique design of these risers allows them to work on virtually any ATV, motorcycle - offroad and street - or snowmobile with 7/8" bars. Risers come with both metric and standard longer mounting bolts. Note - check your cable slack before purchase to determine how high you can raise your bars.

Universal 7/8" Bar Riser - 1" (25mm)	PD15301	35.00	G
Universal 7/8" Bar Riser - 1.6" (40mm)	PD15302	40.00	G

Introducing the new PowerRiser from PowerMadd. This one piece design offers superior strength at an unequalled price. The PowerRiser provides dual pivot points so you can position the riser front to back, while positioning your bars up and down for the perfect bar placement. The PowerRiser comes in two widths - 3.25" for snowmobiles as well as Can Am and Polaris ATVs, and 4.75" for ATVs and motorcycles. Both widths allow you to use standard 7/8" bars or oversize 1 1/8" bars.

POWER RISER 325

The PowerRiser 325 comes in a 2" rise and will work on most snowmobiles with no cable modification.

Check your cable slack for use on ATVs.

Note - One piece OE bar clamps will not work with the PowerRiser 325 - Replacement 7/8" bar clamps are required (PM15470)

788 TRIPLE DENSITY EXTRA SLIM 7/8" - 1"

In all triple density models, the hard density inner tube and the medium density grip ends flanges help toward maximum grip efficiency.

- Firm on the inside, gel density toward the palm of your hand and medium density on the ends
- Riders are always looking for soft grips that don't slip on the bar
- Stronger inner sleeve helps minimize grip movement, while providing both a soft gel material and a harder material where needed.

SENTINEL HANDGUARDS

PowerMadd is excited to introduce our latest handguard offering! The Sentinel Handguard is designed to be the most stylish, durable and functional handguard to date. The Sentinel guard is larger compared to the Star Series which in turn gives you more protection. The mounting brackets are 6061 aluminum, while the guard itself is made of two different types of plastic—a stiff two piece spine for durability, and a softer colored body for flexibility.

The Sentinel protects your hands from flying debris, rocks, bushes, branches, and mud. Plus it keeps your hands warmer by blocking the wind in cold weather. In the summer, simply snap out the removable vent cover to let air flow through. The Sentinel Handguard will work with: Sentinel Armor, Gauntlet, Flare, Hand Wrap, Mirror and Large Mirror.

Note: Requires mount kit 224050, 224051, 224052 or PM14269

STAR HANDGUARD SYSTEM

The strongest protection you can buy. The Star Series Handguard is designed to take a beating. The mounting brackets are tough aluminum, while the guard itself is made of two different types of plastic - a stiff spine for durability, and a softer colored body for flexibility. Designed to protect your hands from flying debris, rocks, bushes, branches, and mud, plus, keep your hands warmer by blocking the wind in cold weather. In the summer, simply snap out the removable vent cover to let air flow through. In winter, remove the optional extensions for added wind protection. Designed with a universal mount system that works on ATVs, motorcycles and snowmobiles and requires only 1/2" of bar space.

SOLD SEPARATELY:

- MOUNTS
- OPTIONAL LARGE AIR DEFLECTORS
- OPTIONAL MIRRORS
- STAR SERIES HAND WRAP

The all new Tri-Mount Kit offers another area to mount the handguards - just below the bend on the rise of the bars. This is an ideal choice when space is limited near the controls, especially on utility quads and some snowmobiles. Easy to mount because there is no need to move controls to make space. Note - works only on 7/8" bars.

MOTION PRO FORGED LEVERS

Dirt bikes lead a hard life. They are ridden hard in rough conditions, and it's not unusual for a dirt bike to hit the ground several times during a ride. Dirt bikes are built pretty tough, but unless the rider is using hand guards, the levers are often short lived.

The stock levers on many motorcycles are made of cast aluminum, which is light and inexpensive to produce, but they are not very crash resistant, and bend and break easily. Forged levers cost more to produce, but are far more durable.

Motion Pro is well known for its complete line of control levers for nearly all motorcycles, and our forged MX levers are the top of the line we offer. Forged from 6061-T6 Aluminum, they are strong and light. Our forged clutch levers feature a needle bearing in the pivot for increased precision and clutch feel.

FOOT NOTES

112

Fits stock throttle housing. Use with accessory bar end mounted hand-guards requires drilling out end cap, which will void warranty. Can be used with open end MX hand guards without any modification.

117

01-0094 and 01-1170 reel diameter is 37mm. The OEM reel size for 2007-2012 RMZ 250 and 2007 RMZ450 is 40 mm, which will make the throttle a little slower and may require free length adjustment on the throttle cable to make sure the throttle can be fully opened.

123

Australian Model

139

01-0094 does not have anti grip rub flange. Recommend installing anti friction washer between grip and throttle housing. Washer readily available through your favorite local motorcycle store. May also purchase from Yamaha dealers. Yamaha OEM p/n : 3Y1-26249-00-00. 01-0094 length is 4 mm less than oem throttle tube.

REV2 THROTTLE KITS

How the Rev2™ Throttle Works

The Rev2™ throttle has several different size reels that will change how much twist is necessary for the throttle to completely open the carbs or throttle bodies on a motorcycle. The larger the reel is, the shorter the twist. Each reel size will shorten the twist by about 10 degrees. If your stock throttle has a 40mm reel and stock twist is 90 degrees (1/4 turn), the 45mm reel will reduce the twist to 80 degrees and the 50mm reel will reduce it to 70 degrees. The 35mm reel will increase the throttle twist to approximately 100 degrees. This is just an example; every model of motorcycle is different.

The included cam reel has a progressive profile that allows the throttle to act like a sensitive, long twist throttle during the initial small throttle openings for precise control and then acts like a more aggressive short twist throttle at large throttle openings, progressively shortening the amount of twist needed to reach full throttle.

The most advanced variable rate throttle in the world

- The 2nd generation of our innovative reel changing system lets you tailor the throttle rate to riding conditions and rider preference
 - New ultra compact housing with snap-together elbows make it easy to install and change reels
 - Sleek new design requires less handlebar space for lever clearance and throttle position
 - Use smaller reels for slower throttle rate and larger reels for faster throttle rate
 - Included cam reel provides progressive throttle response preferred by some riders
 - Unique reel design allows fast reel changes
 - Cable boot keeps dirt and dust out for reliable and smooth operation
 - Billet aluminum in-line cable adjusters for easy installation and adjustment
 - Lower section of cables use 5 mm housing with PTFE liner for reduced friction, increased routing flexibility and lighter weight
 - Upper section of cables use 6 mm housing to provide solid support of adjusters
 - Simple to install and maintain
 - Designed by Motion Pro
 - Patent pending

Australian Model

108

Revolver Kits have cables specifically designed for fitment on specific models, but the Revolver throttle itself is not model specific. Therefore, in some situations, the Revolver kit may not be a direct bolt on installation due to space limitations on the stock handlebar. In some installations, it may be necessary to move other control components on the stock handlebar, shorten the Revolver throttle tube and grip, install longer after market handlebars, or possibly all of the above. It is up to the end user to determine the best method for fitment on their motorcycle, and ensure that the Revolver kit is installed properly and with the correct clearances for safe operation. Installation should be done by a qualified mechanic and carefully checked for proper function. Warning: Improper installation could result in great bodily injury or death.

105

01-2679 Revolver throttle kit features throttle cable set 01-1181 that is 3 inches longer than throttle cable 01-1106 included in Revolver throttle kit 01-2619

096

Off road revolver throttle kits require a minimum of 200 mm of handlebar length in order to provide sufficient clearance between Revolver throttle housing and hydraulic brake lever

M-7 OFFROAD EXHAUST CANISTERS

- › Our new M-7 V.A.L.E.™ exhaust systems feature our exclusive Teflon coated, blunted, cast magnesium outlet and our exclusive X-Lite™ retaining ring. These exclusive Two Brother Racing features not only look great, but also significantly reduce the weight of the exhaust system.

- › The V.A.L.E.™ inlet design eliminates the use of springs and creates an adjustable mount that is rock solid when fixed in place. The system also features a precision mandrel bent, thinwall s-bend tube, and for a full system, a header pipe custom fit for each model.

- › **The P4 PowerTip™** was developed to fill the gap between the P1 and P1-X sound reducing tips. The P4 is more restrictive than our P1-X but quieter than the P1, reducing sound output between 5-6 dB on most pipes. Power loss is minimal. Not recommended for use with a spark arrestor screen.

- › Like all of our other sound suppressors, the P4 is very easy to install - simply unbolt your existing M-7 endcap, drop in the P4 and reassemble. **Note: The P4 is only intended for use with our M series outlets.**

- › Our **P1 PowerTip™** sound suppressor is a recommended accessory for our exhaust systems with M series endcaps. A straight-through sound diffuser, the TBR PowerTip™ quiets the pipe to about 3-4 dB with no significant reduction in horsepower. Not recommended for use with a spark arrestor screen.

- › **Easy to install** - simply unbolt your existing M series endcap, drop in the P1 and reassemble. **Note: The P1 is only intended for use with our M series outlets.**

- › **The P1X PowerTip™** sound suppressor is a recommended accessory for our exhaust systems with M series endcaps. A straight-through sound diffuser, the TBR PowerTip™ quiets the pipe to about 7-8 dB with no significant reduction in horsepower. Not recommended for use with a spark arrestor screen.

- › Like all of our other sound suppressors, the P1X is very easy to install - simply unbolt your existing M-7 endcap, drop in the P1X and reassemble. **Note: The P1X is only intended for use with our M series outlets.**

- › U.S. Forestry Service approved Spark Arrestors are included with all aluminum M-7 V.A.L.E.™ off-road slip-on exhaust systems. These tips mute the exhaust tone slightly with absolutely no loss of horsepower. Additionally these tips prevent the introduction of foreign matter into the exhaust system. This spark arrestor DOES NOT fit, nor is it intended to be used with the C2, C4 or C5 mufflers.

PowerTip™
SOUND SUPPRESSOR

Many municipalities and tracks have begun to implement new, tougher regulations that limit the sound output of street bikes, offroad cycles and ATVs. Two Brothers Racing has developed a series of highly effective sound reducing tips which can help you be compliant.

Our **P1-X PowerTip™** sound suppressor is a recommended accessory for our exhaust systems with M series endcaps. A straight-through sound diffuser, the TBR PowerTip™ quiets the pipe about 7-8 dB with no significant reduction in horsepower. Maybe used with a spark arrestor screen.

PISTON KITS

✚ MOS2 (Teflon/Molybdenum) Coated Skirts

A rolled on application process provides a bond that is 10 times stronger than other spray on coatings. Benefits include increased heat transfer, reduced friction and helping to eliminate cold seizures.

✚ Machined Smooth Heads

Reflects combustion heat and reduces carbon buildup, protecting the top of the piston. Some tests have shown this feature can increase horse power and fuel economy by up to 6%

✚ Anodized Domes

Increases heat resistance and durability; pistons with anodized domes are 75% stronger than non-anodized pistons

✚ Hypereutectic Casting Process

Provides higher silicon content for reduced expansion rates and additional wear resistance; it also has an ability to withstand higher cylinder temperatures

GASKET KITS

Designed and produced using performance materials to provide greater reliability and durability to withstand the needs of today's hardest working engines.

TOP END REPAIR KITS

Provides you with all the necessary components to complete your rebuild: these include a top-end gasket set, pistons, rings, wrist pins, circlips and silver coated SCM415 high strength chromoly needle bearings where needed.

Piston Kits

PROX pistons are precision machined on the latest, state of the art CNC equipment. The same low-expansion, low-friction piston alloy is used as is used for all major Japanese engine manufacturers. PROX Piston Kits are a first class solution to replace the original piston in your Motorcycle, Scooter, Moped, ATV, Personal Watercraft, etc. PROX Piston Kits for sleeved cylinders are available in standard size and a wide range of oversizes. The availability of oversizes up to 2mm significantly helps to increase the lifespan of a cylinder by offering more re-boring possibilities. PROX pistons for plated cylinders come in standard size, as well as in A, B, C, D+ oversizes. Take advantage of the additional oversizes to extend the lifespan of plated cylinders. All PROX Piston Kits are supplied complete with Piston Rings, Wrist Pin and Circlips, ready to install!

Connecting Rods

PROX Connecting Rod Kits are made out of the toughest alloys available today. O.E. specifications and tolerances are meticulously maintained, a guarantee for easy installation and trouble free performance. PROX Connecting Rod Kits come complete with Crankpin, Big-End Bearing, Small End Bearing and Washers.

Gasket Kits

Precision engineering and the use of first class materials guarantee that they meet or exceed O.E. standards.

FORGED POWERSPORTS PISTONS

Powersports Forged Piston Advantage

Wiseco leads the performance aftermarket by producing the highest quality forged pistons for Dirt Bikes, ATV's, Snowmobiles, Outboard Marine, and Motorcycles right here in the USA. Wiseco is unique because we forge all of our own pistons in house, and produce all of our own forge tooling right here in the USA. This allows us to control all aspects of our manufacturing process from raw bar to skirt coating finished parts.

In addition, in-house dyno testing gives Wiseco the ability to develop state-of-the-art technology such as new shapes, coatings, and components, and lead the industry through rigorous R&D. Linking all segments of Wiseco's organization through design, testing, manufacturing, and distribution allows us to fulfill market needs with minimum lead-times.

Piston Engineering / ArmorGlide Coating

Some of our forged pistons offer our new ArmorGlide™ skirt coating, which is the result of testing, development, and benchmarking through Wiseco's rigorous in-house dyno program. The outcome is the ultimate in skirt coating toughness, lubrication, and bond technology working together to minimize friction, maximize horsepower, and provide improved wear resistance. Not only is ArmorGlide™ a high-tech lubricant that reduces friction, but it also allows the piston to be fitted tighter within the bore allowing a better ring seal and reduced noise from piston rock.

Top End Piston Kits

Wiseco's complete top end Piston Kits are offered for nearly every popular application in the powersports market. These kits contain everything you need to complete your rebuild the right way, the first time. High quality parts specifically chosen by us to match our forged pistons are included in this kit for easy one stop shopping.

- 4-stroke kits feature a 'race-ready' dome finish with smooth edges for improved combustion flow. Horizontal slot-pin oiling reduces friction and provides scuff resistance, along with a pressure seal groove for maximum ring seal.
- Most PK/SK/WK/VT kits from Wiseco feature a complete top end gasket kit that gives you everything you need to complete your rebuild from premium materials.
- 4-stroke race applications feature Wiseco's ArmorGlide™ skirt coating to provide reduced friction and noise to contribute to increased horsepower.
- Dedicated forgings used for superior strength to weight ratio utilizing aerospace alloy.
- High Performance ring kit and alloy pin included with each piston kit for extended life and sustained power.

REPLACEMENT RINGS

Some Wiseco 4-Cycle ATV pistons have been manufactured with more than one ring type. The correct replacement ring style is stamped on the dome of the piston. EXAMPLE: 4419PS will be stamped with either a "C" or a "G" to indicate the correct replacement ring style to order. **ONLY WISECO REPLACEMENT RING SETS CAN BE USED ON WISECO PISTONS.**

2-CYCLE RINGS - MOTORCYCLE & ATV

All Wiseco 2-Cycle pistons are supplied with rings and circlips. Only Wiseco replacement ring sets can be used on Wiseco pistons. The replacement ring type and bore size (in millimeters) is stamped on the dome of the piston. Refer to this information to reorder correct replacement rings. Ring styles cannot be interchanged.

TYPE	2 CYCLE RING DIAGRAMS		DESCRIPTION	APPLICATIONS
CS	.039" (1mm)		One chrome-faced high temperature steel alloy, internally notched compression ring.	Cast-iron, Nikasil and Electrofusion Liners
CD	.039" (1mm)	.039" (1mm)	Two chrome-faced high temperature alloy, internally notched compression rings.	Cast-iron, Nikasil and Electrofusion Liners

TD	.047" (1.2mm)		Two chrome-faced high temperature steel alloy, internally notched compression rings.	Cast-iron, Nikasil and Electrofusion Liners

4-CYCLE RINGS - MOTORCYCLE AND ATV APPLICATIONS

All Wiseco 4-Cycle pistons are supplied with rings, wrist pins and circlips. Only Wiseco replacement ring sets can be used on Wiseco pistons. The replacement ring type and bore size (in millimeters) is stamped on the dome of the piston. Refer to this information to reorder correct replacement rings. Ring styles cannot be interchanged.

VALVE TRAIN & CAMSHAFTS

Wiseco's new Valve Train components are the next great products available to maximize the performance of your highly stressed racing engine!

Each new product is made from premium materials for maximum strength and durability, and exceed OEM tolerances and specifications.

Rigorous in-house engineering and testing ensures each product bearing Wiseco's name lives up to the highest standards in quality and performance!

CAMSHAFTS

Wiseco cams produce great torque and horse power gains. Each cam is rigorously tested to produce real "seat of the pants" power increases.

- Produces a camshaft that is tougher and stronger than cast iron cams. Requires no core exchange.
- Reduces friction on the cam buckets and reduces galling at high RPM's.
- Optimizes the valve timing and closes the valves with the perfect deceleration profile. This eliminates valve bounce and reduces premature valve failure.
- Installs using OEM components. No extra parts or special setup required.

VALVES

Manufactured to the highest quality standards and specifications. Exceed OEM standards.

- Just like our pistons, forged valves offer higher strength and fatigue properties due to the 1-piece construction.
- Offers superb surface hardness and wear resistance.

CAM CHAINS

- Manufactured to the highest quality standards and specifications. Exceed OEM standards.

VALVE GUIDES

We choose to use the copper based C63000 nickel-aluminum bronze as a material to make our bronze valve guides because of its ideal characteristics for the application. The 5% nickel content provides superior resistance to wear, and the approximately 80 percent copper content delivers outstanding heat conductivity. KPML® guide profiles are designed to have minimal effect on the airstream while maintaining critical cross sectional thickness in high temperature areas, which promotes high performance and endurance.

BLACK DIAMOND VALVES

All KPMI® Black Diamond™ Stainless steel valves are impregnated by a special German process to a depth of .002, with a surface build up of .0002. This Black Diamond process improves wear properties, reduces friction, and provides resistance to corrosion and wear that is superior to chrome and nickel electrolysis plating. Each valve is designed using Finite Element Analysis software, and profiles are tested on our computerized flow bench. Black Diamond™ Valves are lightweight, strong, one piece forgings with profiles that provide excellent flow characteristics.

PRO X ENGINE VALVES

PROX Valves are made in Europe to high quality standards. By using a forged one-piece titanium alloy with several integrated material micro structures, specific and different material properties are created in area's where needed. The high tech Ti3Al alloy has also very good material properties at high temperatures. The special coating creates considerably lower friction between the valve and other parts like valve guides. Therefore the PROX valves exceed OE specifications in dimensions and reliability.

BOTTOM END REBUILD KITS

FORGED BOTTOM END ADVANTAGE

The foundation of any bottom end rebuild is a solid forged crankshaft assembly, which provides strength and reliability far surpassing any cast part that lacks consistency. Forged crankshafts due to their lighter weight, more compact dimensions and better inherent dampening, rev higher and run smoother than their cast counterparts.

This part of the engine has a huge amount of stress due to twisting and bending 1000's of times a minute while running under load, you don't want an inferior product here to ruin a motor. Wiseco engineers have designed our crankshafts to meet or often exceed OEM tolerances giving you the best base for your bottom end.

CRANKSHAFTS / CONNECTING RODS

Wiseco powersports crankshafts feature a double forged connecting rod made from dedicated forgings. The rods maintain superior strength, durability, and dimensional consistency through improved grain flow. Shot peening eliminates residual stress and oil slots are located to maximize lower rod oiling and extend bearing life.

Coated bronze thrust washers have a dimpled design to increase oil retention and reduces stress between the connecting rod, washer, and crank web. Double-drilled small ends provide the piston pin with extra lubrication and cooling, reducing distortion of top end due to thermal transfer from the piston.

Wiseco has designed these crankshafts and connecting rods to work together with our pistons to provide the smoothest rotating assembly possible. Having a complete bottom end that is made of 100% forged material will give you the piece of mind that your motor will be able to withstand any abuse within reason.

Professional racers as well as weekend riders choose these solid kits to reduce failure rates and take advantage of the horsepower and immediate torque a light weight bottom end can deliver.

BOTTOM END KIT FEATURES

- Each kit contains everything you need to complete your rebuild the right way, the first time- crankshaft and connecting rod, all applicable bearings, and complete bottom end gasket kit made to meet or exceed OEM.
- Wiseco connecting rods are double forged from a dedicated forging and feature shot peening, oil slots, and coated bronze thrust washers.
- Bottom end gasket kits are made from premium materials, exceeding OEM standards, to provide exceptional seal between critical mating surfaces.
- Main bearings are manufactured to the highest quality standards. Each is case hardened for maximum life and smooth operation at high RPM's.
- Corrosion resistant surface treatment to prevent corrosion and pitting over long term use or storage. This will add to the life as well the strength of the assembly.
- Top end of rod is bushed for oil retention and eliminates pin galling. The bottom end rod bores are case hardened to 58-62 RC to optimize bearing running surface.
- The crank pin bearings are manufactured from the highest quality, hot rolled steel case hardened to 58-62 RC to extend the lifetime of the assembly.
- Caged needle roller bearings to provide the highest possible RPM.

HOT RODS CRANKSHAFTS

Hot Rods crankshafts are regarded as the premier alternative to costly manufacturer cranks. But, in addition to being a cost effective alternative, Hot Rods crankshafts also bring a level of uncompromising quality, design and innovation not seen in its competitors. One such innovation would be the Hot Rods line of drop-in stroker crankshafts. Not only do these stroker cranks bring about a heightened level of performance, but do so without costly case machining, custom cam chains and spacer plates. Better yet, many Hot Rods stroker cranks even utilize the engine's stock piston.

CONNECTING RODS

One single connecting rod is where it all began for Hot Rods and, now, with over a decade of experience, continuously improved designs and an ever expanding line of applications; Hot Rods has continued to be, not only "The Original" aftermarket replacement rod, but the best aftermarket replacement rod. All of our rods are created from 8620 case hardened steel. But, in addition to that, our rods also undergo a process of double forging which helps to improve grain flow as well as dimensional consistency — and that means a rod of uncompromising strength. To improve fatigue durability, all of our rods are also shot peened. This process, utilizing a stainless steel shot, helps to remove stress risers and creates more smoothly blended radiuses. And, in the end, a Hot Rods connecting rod is one of the most durable rods that enthusiasts and engine builders can buy. However, a rod is only as good as its supporting parts and that's why a Hot Rods kit features only the most advanced and durable bearings, crank pins and thrust washers. Case hardened, silver coated, flat profile KU bearings are used throughout our entire line and high-quality, long shouldered KZ bearings are used in our two-stroke wrist pin bearing applications. In short, our bearings are just as tough and reliable as our rods. Even our crank pins are subjected to the same rigorous standards as our rods and bearings. Each Hot Rods crank pin is created from hot-rolled ASTM 4115 steel and case-hardened to a level of 58–62 Rc.

ATHENA RACE GASKET KITS

Athena has specifically designed this for the Pro, Semipro, and Amateur riders who freshen up their engine prior to a race series or during mid season. The kit will include a top of the line MLSS (Multi Layer Stainless Steel) Head Gasket and two premium quality base gaskets, one of which has a reduced thickness of 0.1 mm, to optimize engine compression ratios. This new composition gives the rider/technician a choice to increase compression and decrease the squish in order to get better performances.

Our kits are very competitively priced and supplied in captivating packaging. These are sure to be a strong seller in the marketplace!

SUPERIOR PERFORMANCE THROUGH INNOVATION

RAW MATERIALS Each Head Gasket configuration utilizes the best raw materials available, such as AISI 304 Stainless Steel. Athena utilizes state of the art processing such as in-line laser cutting and multi-stage stamping technologies. With our Multi-Layered Steel (MLS) Head Gasket, each layer is individually blanked and formed specially to optimize performance.

OPTIMIZED EMBOSSING FORMATION Through multi stage processing, our embossing process optimizes the radius in the bend areas. The result is reduction in stress points, improved conformability, and superior wet-out (contact area) that is superior to the competition. Our technology also provides a consistent inner flange spacing of (minimum 1 mm) from the edge to the embossed start point. This results in a superior seal in the embossed areas.

STRESS STABILIZATION & RELAXATION This proprietary tempering process significantly reduces forming induced stresses. Pre-coated metal (used by competition) would not be able to survive this stabilization process. Advantages of a tempered metal are reduced hardness and brittleness, increased flexibility and deformation retention. This process dramatically increases the long term durability and reliability of each head gasket.

PROPRIETARY COATING TECHNOLOGIES Four different layers are used to provide the ultimate seal between the head and block mating surfaces. These coatings will normally eliminate the need for additional deck surfacing. Our coating processing provides 100% encapsulation of all exposed metal, far superior to the competition that has exposed raw steel on the edges. The layers include Fluoroelastomer (FKM) for extreme-temperature and chemical resistance. This technology provides superior conformability, oxidation resistance, and better removability, even after extreme temperature exposure.

WHY HIFLO?

Providing unbeatable performance and exceptional value, Hiflofiltro is the best-selling brand of aftermarket filters for motorcycles, scooters, and ATVs worldwide. The filters are also supplied to original equipment manufacturers as well as private label brands.

Materials

To achieve our quality aims and to ensure the consistency of our products, we use only premium materials from well known manufacturers: steel from Toyota Tsusho and NKK Japan, glue from Henkel Germany, filter paper from Ahlstrom Filtration Finland, Hollingsworth & Vose USA and Awa Paper Japan.

Production

The Hiflofiltro-Thai Yang Kitpaisan factory was founded in 1955 and has been manufacturing filters for the OEM motor industry since 1963. With the experience of more than four decades, continuous research and development and modern production facilities, we manufacture some of the best quality filters in the world.

Quality Control

Every oil filter goes through 16 individual quality control checks before it is ready to leave the factory. The whole manufacturing process, including the checking of raw materials, individual filter testing, is regularly audited and verified independently by TÜV SÜD.

TWIN AIR DIRT BIKE FILTERS

Twin Air filters are designed to increase air volume around the filter to improve airflow into the intake. More air means more power for your engine. Flow bench tests have proven that Twin Air filters provide increased airflow while reducing the filters tendency to clog. You won't have to worry about your filter falling apart, because all Twin Air filters are constructed using an exclusively formulated adhesive that is unaffected by repeated cleanings. Twin Air filters are the choice of champions because they provide more power and longer life for every high performance engine.

BOYesen DIRT BIKE PRO SERIES REEDS

Q: What advantage do Pro Series ReedS have over Power ReedS?

A: Pro Series dual-stage reeds combine a carbon-fiber top reed with a fiberglass bottom reed for unrivaled performance. The Pro Series ReedS are more responsive than our traditional Power ReedS. The carbon-fiber top reed has excellent response characteristics that provide even quicker acceleration, stronger throttle response, and more over-rev than our standard Power ReedS. The fiberglass bottom reed provides stability and longer reed life.

AIR4ORCE TUNABLE INTAKE SYSTEM

- The AIR4ORCE tunable intake system by Moto Tassinari completely replaces your stock air intake boot with one that is custom designed to allow maximum air volume
- Adjust for different types of tracks/riding, such as motocross or supercross which often require the power in different places.
- Included with each AIR4ORCE are two interchangeable velocity stacks:
 Long velocity stack: Increased stock power curve, with better acceleration
 Short velocity stack: Stronger mid-to-top power, with better acceleration.

SLP "POWER PACK" FOR TWO AND FOUR-STROKE MOTORCYCLES

Let SLP's Power Pack deliver a violent burst of low end horsepower like you've never experienced before. The power Pack maximizes your power from bottom to top end by utilizing this new technology, through a series of venture dividers placed in the carburetor to increase air velocity at different throttle positions. This increased velocity results in better fuel atomization which in turn delivers instant throttle response, improved low end through midrange horsepower and improves fuel economy.

Easy to install and tune, the increase in throttle response is so significant that a firm grip on the handlebars is mandatory.

The TMX features a flat slide design in a smooth bore Venturi to provide improved throttle response and wider powerband. The float system with independently moving floats, working with a main jet enclosed in a baffle chamber, allows the TMX to perform smoothly without hesitation on the roughest terrain. TMX Series Carburetors are available in 35mm bore sizes for 125cc race engines, and in 38mm bore sizes for use in 250cc race engines.

Mikuni TMX Series Carburetors are intended for off-road riding and racing use only. Not legal for sale or use in California or other locations where similar pollution laws may apply.

POWER JET KIT

Power Jet Kits are used in two-stroke engine applications to improve midrange throttle response and add additional fuel to wide open throttle running conditions, especially with snowmobile clutches. Kits may be installed easily on Mikuni TM and VM Series carburetors.

The Jet Needle controls the fuel mixture in the mid-range 1/4-3/4 throttle position. The taper of the needle determines the amount of the fuel. For example: the thinner the diameter of the needle, the more fuel will be drawn. The thicker the diameter of the needle, the less fuel can be drawn.

THROTTLE VALVES

To determine a left hand or right hand throttle valve you must look at it from the intake side (cutaway facing you) to see what side your idle adjustment is on. If it is on the left side, it is a LH throttle valve and if it is on the right side it is a RH throttle valve.

* All machines to be converted must have an external crankcase impulse line to operate the Mikuni Fuel Pump. This is a universal kit containing all of the major components necessary to convert to Mikuni Carburetion. Because of the variety of machines that used the Tillotson and Mikuni carburetors, this is not a bolt on direct replacement kit. Jetting, fuel pump installation, cable installation to controls, fuel and impulse line installation are all part of the dealer's custom installation.

K&L AIR CUT OFF VALVES

Here's an inexpensive alternative to the costly OEM assembly. To prevent "afterburn" generated by a lean fuel mixture when closing the throttle, the air cut-off valve temporarily closes the slow-jet air passage, creating an instantly richer mixture. Included in these high quality kits are all parts necessary for a complete rebuild (diaphragm, spring and o-ring). Made in Japan.

REMOVES WATER FROM FUEL

The Fuel Filter Funnel by Mr. Funnel is a heavy-duty, anti-static, and fast flow funnel with built-in filter technology. When fuel is poured through the Fuel Filter Funnel, water and debris will not pass through the filter's fluoropolymer-coated stainless steel filter. Only filtered fuel flows through to your engine, improving its efficiency, durability, and proper operation. The sump area collects the deflected water and debris for proper disposal. The Fuel Filter Funnel by Mr. Funnel will filter gasoline, diesel, heating oil, kerosene and 2-cycle mixed gas.

What Model Do I Need?

The Mr. Funnel Fuel Filter comes in four different fast-flow models (See below). Models differ mainly on flow rate. If your need is to transfer five gallons or less of fuel, then the F1 and F3 are for you. If you are transferring more than 5 gallons, then the F8 and F15 are right for you. Our F15 is our fastest flow model at up to 15 gallons per minute! This model can also be used at a fuel pump. Get your Mr. Funnel Fuel Filter today, and keep your engine running smooth!

ELECTRICAL & IGNITION

Not all snowmobiles have an electric start, but if you're lucky enough to own a model that does, you want it to start when you push that button. **So does the manufacturer, and that's why they choose Yuasa.**

Some of Yuasa's most heavy-duty batteries live under the hoods of some of the biggest, and fastest, snow machines in the country. Just ask Arctic Cat, Bombardier (Ski-Doo), Kawasaki, Polaris and Yamaha...

They demand the best, and that's why they overwhelmingly choose Yuasa, So should you!

MAINTENANCE FREE HIGH PERFORMANCE

If high power is top priority in a replacement battery, look to Yuasa's High Performance Maintenance Free batteries. Yuasa means more power, less maintenance and longer life. Yuasa's High Performance Maintenance Free batteries are your best choice for motorcycles, utility vehicles, scooters, ATVs, riding mowers, personal watercraft and snowmobiles.

ALL OF THE FEATURES OF A STANDARD MAINTENANCE FREE **PLUS**

Increased Power – Up to 30% more cranking amps thanks to a radial grid design and additional plates. **Selected types also available in Factory Activated** (filled, sealed and charged at the factory).

**MAINTENANCE FREE**

Absorbed Glass Mat (AGM) Technology is an advanced battery design used in Yuasa's Maintenance Free Batteries that eliminates water loss. Once it's filled with acid the battery is permanently sealed - so you'll never need to fill it with water or check the acid level.

**Long Life**  
Because of its lead calcium design, the AGM battery will hold its specific gravity more than three times longer than conventional lead antimony types. This means much longer periods between charges when the battery is used in a standby mode, like winter storage. And to remain factory-fresh the AGM battery is shipped dry along with its own pack of high-gravity acid that's added at the time of installation.

**Sealed, Non-spillable**  
Once filled with acid from its special packs, the AGM battery is virtually maintenance free. It's totally sealed and all of the acid is absorbed in the special plates and separators, so there is no need to worry about acid leaks on valuable vehicle parts and accessories.

**Selected types also available in Factory Activated** (filled, sealed and charged at the factory).

YUASA BATTERIES

YUMICRON CX

The YuMicron CX was the first small engine starting battery to use "lead calcium" technology. This special technology means the YuMicron CX generates more power, requires less maintenance, and lasts longer than any other conventional battery.

More Power

Because of its unique design, the CX will generate 5% to 8% more cold cranking amperage than our own high-output YuMicron lead-antimony battery. For high compression machines, this means greater reserve capacity and more starting power.

Less Maintenance

The YuMicron CX lead calcium technology also reduces water loss, so the CX requires servicing (water filling) only about one-eighth as often as ordinary lead-antimony types.

Longer Life

The YuMicron CX holds its specific gravity more than three times as long as lead-antimony type batteries resulting in a longer shelf life. This feature means longer periods between charges, especially during winter months.

ELECTRICAL & IGNITION

POWER SONIC BATTERIES

Tough & Reliable. Whether you ride daily, seasonally, or just on weekends, you'll get more enjoyment out of your motorcycle, ATV, PWC or snowmobile with a Power Sonic battery. Our batteries perform reliably during off-road, over water and cold weather use, and keep their charge even after months of storage. Available in traditional flooded or the new sealed AGH designs, Power Sonic batteries are built to withstand punishing vibration, salt spray, gas and oil, and protect against equipment-damaging spills, corrosion and seepage.

Nothing ruins a weekend faster than a dead battery, so we use advanced designs and manufacturing techniques to shorten current paths and reduce resistance, giving you higher cranking power and maximum battery life.

MAINTENANCE FREE HIGH PERFORMANCE

SEALED MAINTENANCE FREE

Once these batteries are put into service, they become a completely sealed unit requiring a lot less maintenance than Conventional Batteries. Although the battery still needs to be charged on a regular basis if your vehicle is not in use, there is no need to monitor the fluid level in this battery type. Unlike the Conventional Battery, once this type battery is sealed, it becomes spill proof, which can eliminate damage from battery acid that can occur from using a flooded battery.

FACTORY ACTIVATED MAINTENANCE FREE

The same convenience and technology as the Sealed Maintenance Free Batteries mentioned above, except this battery is sealed and activated at the time of manufacture. Very convenient to the point that all that needs to be done is put the battery into your vehicle and you are ready to ride. The only downside of this type of battery is that all batteries once activated have a shelf life, and if this battery is not going to be used right away, or be put in a vehicle that is not going to be ridden on a regular basis, the battery will need to be kept charged on a battery maintainer.

Tough & Reliable. Whether you ride daily, seasonally, or just on weekends, you'll get more enjoyment out of your motorcycle, ATV, PWC or snowmobile with a Power Sonic battery. Our batteries perform reliably during off-road, over water and cold weather use, and keep their charge even after months of storage. Available in traditional flooded or the new sealed AGH designs, Power Sonic batteries are built to withstand punishing vibration, salt spray, gas and oil, and protect against equipment-damaging spills, corrosion and seepage.

Nothing ruins a weekend faster than a dead battery, so we use advanced designs and manufacturing techniques to shorten current paths and reduce resistance, giving you higher cranking power and maximum battery life.

CONVENTIONAL

This type of batteries has flooded electrolyte and is very accessible. These batteries have to be carefully and periodically maintained. The conventional batteries are normally less expensive than the other types mentioned, but with the cost savings come more maintenance. You will need to add distilled water from time to time to prevent the battery from sulfating. Water loss is a normal characteristic of this type of battery because of the high temperature inside, and the process of electrolysis and evaporation. This means the fluid level of the battery needs to be checked on a regular basis. Conventional batteries also tend to discharge more rapidly than AGM type batteries.

Battery Tender Lithium Battery FAQs:

What is the difference between Lithium Ion batteries and Lithium Ion Phosphate batteries?

Lithium-ion batteries are rechargeable batteries that use lithium as one of their active components. Lithium Ion Phosphate Batteries are a type of lithium-ion batteries known for their long life and inherent safety.

How does the "Lead Acid Equivalent" capacity rating compare to Flooded, AGM, and Gel cell battery ratings?

The capacity of lead acid batteries decreases markedly when discharged at high currents such as when starting a vehicle. This effect is much less for a lithium battery. In fact, when discharged at a current equal to its capacity, a 2 A-hour lithium ion phosphate battery will have as much capacity as a 9 A-hour lead acid battery.

Can I use a standard Lead Acid charger/maintainer for my Battery Tender® lithium battery?

As long as the battery charger does not have a desulfation mode and the peak voltage does not exceed 14.8V during the charge cycle it can be used to charge a Battery Tender® Lithium Battery. Of course the best way to charge and maintain a Battery Tender® Lithium Battery is to use a Battery Tender® Lithium Battery Charger.

What is the best way to store my battery long term?

A Battery Tender® Lithium Battery has virtually no self-discharge and has a shelf life of 2 years. The best way to store the battery is disconnected from the vehicle in a clean and dry location with the protective covers installed on the positive terminals.

How do I prevent water damage or corrosion to my battery?

A Battery Tender® Lithium Battery has a waterproof construction however the battery should be kept clean to minimize corrosion. A corrosion inhibitor can also be used on the terminal and connections.

How do Lithium batteries Cold Cranking Amps "CCA" rating compare to Lead Acid batteries?

When talking about lithium batteries used for engine starting the term CCA is used when making comparisons of the cranking ability to that of a lead acid battery in the same application. It is important to select a Battery Tender® Lithium Battery that has a CCA rating that is equal or greater than the lead acid battery it is replacing.

What happens if I hook up my battery charger to the wrong terminals?

If you happen to hook up your battery charger cables in reverse (positive cable to negative terminal and negative cable to positive terminal) then you will potentially damage the battery.

What happens if I hook up my battery to the wrong terminals on my vehicle?

If you incorrectly connect your battery to the wrong cables (positive cable to negative terminal and negative cable to positive terminal) then there is a chance for spark and damage to the battery
