SOLAR BATTERY CHARGERS + MAINTAINERS

BRING LIFE TO YOUR BATTERIES WITH THE POWER OF THE SUN

Solar panels are comprised of photovoltaic cells ("photo" meaning light, "voltaic" meaning electricity) that convert sunlight into power.

The sun gives off enormous amounts of energy in the form of heat and light, which is captured by the cells. In turn, the power from the light essentially loosens electrons from the cells in order to create a flow of energy. This energy is then directed to either a storage unit (such as a battery) or through a regulator (such as our FLEX line) directly to a device. This allows you to generate energy wherever you go, as long as the sun is shining.

Keeps 12-volt lead-acid batteries fully charged and maintained through solar power and provides up to 180mA (for the 2.5 Watt) / 410mA (for the 5 Watt) charging current to counteract parasitic drain of most vehicles, such as cars, boats, trucks, motorcycles, ATVs, RVs, lawn mowers, and more. Safely charges wet cell, gel cell, AGM, enhanced flooded battery or any maintenance-free battery. Built-in safety protection for short-circuit, open-circuit, and over-current. Its ultra-low profile design makes it simple and easy to install, and completely weatherproof for outdoor use (rated at IP65). Integrated LED indicator illuminates when generating power. Thin film technology for performance in low-light, cloudy and overcast conditions.

Juice Box Pro adds performance with map storage, computer optional full customization and the ultimate in PC-based tuning capabilities to the proven Juice Box fuel management platform. Two Brothers Racing, continually dedicated to Top Level Performance, dials in Fuel Injection performance like never before with the Juice Box Pro. Offering memory capacity for up to 10 fully custom fuel maps and virtually limitless tuning potential, the Juice Box Pro revolutionizes the plug-and-tune category of performance electronics.

Custom-Designed Fuel Mapping

Juice Box Pro is the only fuel management interface to offer preloaded, dyno tested bike-specific mapping and the ability to fully customize and build your own Power Maps via computer in a simple to-install, user-friendly component. Through TBR's Direct Injector Control, the fuel circuits on current sport bikes can be modified both richer and leaner than stock as much as -100% to +250% in any particular area of the power spread with the Juice Box Pro. Also, up to 10 pre-programmed TBR Power Maps (custom made and dyno tested for each Two Brothers Racing exhaust system) are adjustable to your preference. Riders can literally select between a TBR Power Map, custom-built maps, or even fine tune low, mid or high rpm ranges while sitting on the bike and without plugging in to a computer. Standard +/- 10% increments from selected map settings, different ranges are available using the supplied Top Tune software.

Computing Power

For racers and riders looking for the ultimate in precise adjustment and fuel map customization and creation, Two Brothers Racing's Top Tune software allows PC-based Power Map creation at 250-rpm increments and 10 different throttle positions. Modification parameters vary upon make and model of machine and fuel changes made in these increments are automatically interpolated between the rpm and throttle position ranges ensuring a smooth final power curve. Users can load up to 10 of their personally built Power Maps into the Juice Box Pro and select between them while in the saddle—eliminating the need to “re-boot” with the computer every time a new map is desired.

JUICE BOX™ PRO PREMIUM FUEL CONTROLLER

- Uses OEM style connectors and high quality wiring harnesses.
- Small, Lightweight and Easy-to-Fit on the bike
- Pre-programmed with TBR Power Maps specific to make, model and style of TBR Exhaust and/or TBR Pro Filter
- No computer necessary for Top Level fuel management
- Fully adjustable computer compatibility for ultimate tuning and personalization
- Software is compatible with Power Commander, so you can download Power Commander maps to the Juice Box Pro

To get the most out of upgrades like high compression pistons, performance camshafts, exhausts or another power adding components, adjusting the amount of fuel being delivered is a logical next step. Much like re-jetting or adjusting the pilot, needle, and main jet circuit in a carburetor, Wiseco's 3.5 Fuel Management Controllers can really enhance the performance of aftermarket parts. Wiseco's new Generation 3.5 Fuel Management Controllers for EFI tuning are extremely simple and easy to use and better yet they require no dyno, complex hookups, power supplies, or extra wiring harnesses! With the push of a button, you can easily adjust fuel delivery by adding/subtracting fuel from each zone to work in conjunction with your latest modifications. The display lights on the controller will display the injector pulse duration, which provides instant feedback for where to make the tuning adjustments. Simply plug the included connector into the existing factory wiring harnesses, mount the controller for easy access, and make the adjustments without ever leaving the seat of your bike/ATV. It doesn't get any easier than this to dial in your new EFI engine.

MAGIC POWER BOX

A New Concept of Power!

Compatible with any ATV, Motorcycle, Watercraft or Snowmobile with an electric start!

The Concept:

When you throttle up your machines, the battery output voltage is unstable; it changes between 11V and 15V, the spark energy is inconsistent and your machine lacks power.

With the Magic Power Box the output voltage will be almost 100% stable. Your machine can reach the maximum power.

Easy Installation!
Just attach leads to battery mounts

**773-400
99.00 B**

- Increase Horse Power • Increase Torque • Quicker Throttle Response
- Increase Spark Energy • Improve Fuel Efficiency • Easier Start & Runs Cleaner

STATORS

Procom manufactures stators on a modern stator core with the highest grade copper wire for the various windings. All winding is done on computer controlled winding machines to achieve absolutely perfect winding quality which is especially critical for the ignition source coil on this stator.

We install very high grade lead wires, connectors and seals and have developed an insulation coating process that is the very best. The result is a stator that is superior to the OEM stator in reliability and performance.

All stators manufactured by Procom comes with a full one year warranty.

RECTIFIER

**Improved Rectifier | Regulator
Increases Horsepower up to 8%**

How does the re-designed Rectifier increase horse-power?

We built an extra sensor and switch in the unit. When the battery is near fully charged, the sensor instructs the Magneto Rotor to run without cutting the magnet field. The rotor then runs lighter and saves the power to the engine. The engine gains more horsepower to drive your machine faster!

PIAA

POWERSPORTS

PIAA BULBS

GREATER PERFORMANCE: PIAA bulbs are engineered with XTRA Technology for greater performance per watt than any other bulb on the road. (XTRA is a term coined by PIAA to designate a high-efficiency bulb that is designed to produce greater light output than its rated power consumption, i.e. 55W = 85W of light output.) Greatly enhance your ability to see and be seen. A metal bond holds the heat-resistant glass tube securely to prevent cracks and leaks. A welded focus ring and one-piece filament support assures proper positioning.

BRILLIANT COLOR: Beam color affects visibility and eye strain over long periods. The brilliant white/blue light allows comfortable night driving over extended periods of time. PIAA bulbs are both a performance upgrade and an aesthetic enhancement. You will see the difference even in the daytime.

WARRANTY AND SUPPORT: PIAA is so confident in the durability and reliability of our products that we offer a no questions asked, replacement of any halogen bulb that fails within one year of purchase.

Super Plasma GT-X

The Super Plasma GT-X bulbs offer an unmatched combination of fashion and performance with a bluish-purple color very similar to H.I.D. and the closest yet to sunlight.

Xtreme White / Xtreme White Plus

The Xtreme White Series of bulbs have a cool white light output that gives the driver better color recognition on depth perception and better contrast. The blue top coat adds a slight blue tint to a lamp with no loss of performance.

Intense White

The Intense White bulbs produce a radiant white beam and provide the best possible balance between performance and bulb life.

Star White

Star White bulbs are significantly whiter and brighter than stock halogen and will increase bulb performance without taxing your vehicle's electrical system.

Ion Crystal / Plasma Ion Yellow

Ion Crystal coating transforms white light into amber light without diminishing the strength of the beam. Ion Crystal technology allows as much as 95% of the light produced by the bulb to pass through, compared to as little as 65% through dyed glass. The long wavelength Plasma Ion beam reduces refraction for dramatically increased visibility in snow, rain and fog.

ALL WEATHER

(AW) These bulbs are designed for rain, fog and snow and are just as bright as standard halogens. The all weather dichroic coating keeps the glare down from the elements.

ALL WEATHER BLUE

(AWB) Same advantages as the all weather, plus the blue coating is more noticeable to oncoming traffic. Note: The coating does decrease the light output slightly.

GOLD

(G) The biggest advantage is its ability to be seen by oncoming traffic.

XENON BOOSTED

(XPB) Best performing lamp on clear nights, the xenon gas increases the light output to compensate for the special vycor blue coating. These combinations bring the light as close to daylight as possible.

VESRAH CLUTCH FRICTION PLATE/ METAL PLATE SETS & HEAVY DUTY CLUTCH SPRING SETS

Vesrah clutch discs and springs are manufactured to OEM specifications. Each clutch disc is made from high density, high friction material which reduces expansion and fading. Heavy duty springs are heat treated.

Note: For complete rebuild, Qty (1) each of the friction plates, metal plates and spring sets are required per model.

WISECO CLUTCH COMPONENTS | CLUTCH BASKETS, INNER HUBS, & PRESSURE PLATES |

FORGED CLUTCH ADVANTAGE

Wiseco leads the clutch aftermarket with high performance FORGED clutch baskets, inner hubs, and pressure plates. OEM clutch components are made from inexpensive die-castings that quickly wear out and become easily notched. Wiseco offers the only forged clutch components in the aftermarket for off-bike and ATV applications. The feature aligned grain flow in the aluminum adds strength and toughness to the parts that are unparalleled through other manufacturing processes.

Each Wiseco clutch basket, inner hub, and pressure plate start as dedicated forgings built specifically to take advantage of features that can only be made through the precision forging process. Variable fillet blends and complex surfaces can be forged into the part that would otherwise be extremely difficult to produce. The raw forgings are then precision machined to very close tolerances, producing the same high quality parts as Wiseco pistons.

The finished parts are hard coat anodized and Teflon coated to offer superb wear resistance, and a long life of smooth clutch operation. Every new clutch basket is supplied with new components used during assembly, including new fasteners with pre-applied thread locker.

FEATURES & BENEFITS

- Built on dedicated precision forgings
- Made from Aerospace grade aluminum alloy
- Hard coat anodized
- Teflon coated
- Supplied with high-quality fasteners with pre-applied thread-locker
- Designed to maximize strength through "feature aligned grain flow", and utilizes as-forged features that can only be produced using Wiseco's precision forging process. Produces higher mechanical properties and resistance to impact and fatigue.
- Certified raw materials produce the highest quality finish products.
- Produces an ultra tough abrasive resistant surface, and ensures a long life of smooth clutch operation through the elimination of wear on the sides of the clutch basket tabs.
- Seals the coating to create a near frictionless surface for the clutch plate tabs to glide upon.
- New fasteners are high strength and come with the thread-locker pre-applied.

- **Connecting Link Reference** - SL: Spring/Clip Link, RL: Rivet Link, DL: Dual Link (contains both link types)
- **Pin Riveting** - Pressed four times for an extra strong rivet that resists powerful lateral forces on the outer plate
- **Solid Bush** - Solid bushes provide enhanced resistance to distortion from repetitive shock loading
- **Riveted Bush** - All 520 HDR/HDS/X1R/X1R2 have riveted bushes that resist powerful lateral forces on the inner plate
- **X-Ring Seal** - X-Ring seals offer better sealing than the conventional O-Ring and produce far less friction. All sealed JT chains are equipped with X-Rings

Z-RING CHAIN

The new, high-performance, outstanding ZR chains take a big step forward with the new patented Z44 seal rings. These new generation seal rings, which feature a special-designed conical shape on their inner side, are the result of the evolution of previous X-ring and Z-ring designs.

Features of this design are:

- Patented "Z" ring section.
- The Z-ring flexes when assembled, creating a spring effect that guarantees the seal will not diminish over time.
- The lubricant trapped between the plates and the lobes of the Z-ring keeps the ring lubricated and increases its life.
- ZR chains are the best choice for the most severe and demanding applications. Among other characteristics, the ZR chains feature high alloy steel plates and pins, solid bushings and rollers, shot-peening of plates, pins and rollers, performance-enhancing pre-stretching and "gold" outer plates.

ZERO STRETCH TECHNOLOGY

EK Chain's new Zero Stretch Technology virtually eliminates measurable chain stretch in the first 1000km of use. ZST puts an end to the hassle of retensioning the chain after the initial break-in period, when most chain stretch occurs. For racers, this can mean going several race weekends without a single chain adjustment. You also get the confidence of knowing that a chain with ZST will stay within wear tolerances throughout its entire service life. ZST is standard on the 530ZZZ chain, and available as an option on some MVXZ series chains.

SPRING CLIP LINK TYPE 42

This link is a good compromise of installation and the safety level, as it is much more resistant to fatigue than the slip fit connecting link type 26. It should be used only for low power applications on motorcycles having low displacement (max 400 cc) or for short distances at moderate speed.

EK STANDARD AND OPTIONAL CONNECTING LINKS

Some of the EK chains in this catalog are available with different style connecting links. All are easy to install, however some like the (Rivet-type) link require a special rivet tool. This tool can be purchased separately

MASTET-RIVET-TYPE

The MLJ is our most dependable connecting link, more commonly used on street machines. Requires special riveting tool to install.

CLIP-TYPE (SEMI-PRESS FIT)

The SKJ is easy to install and very similar to a standard SPJ link. The SKJ's re-designed link plate requires additional pressure to push onto the connecting pins but offers increased dependability and a tighter fit. Comes standard with many motocross, off-road, ATV and drag racing chains. Can be easily installed with a standard pair of pliers.

SLJ: SCREW TYPE

The SLJ is easy to install and a very dependable alternative. Patented mechanism allows easy installment with a wrench and a pair of pliers. Available only as option for selected sealed chains.

SCREW TYPE MASTER LINK

EK's screw type master links do not require any special tools for installation. This unique patented link gives a rivet-like fit, using only an 8mm wrench and a pair of pliers.

SEALED (O-RING) DRIVE CHAIN

Specifically designed with sealed-in lubrication, makes KMC sealed chain work to its optimum life. Superior alloy steel is used and heat-treated to provide best performance in strength. In addition, specially formulated grease contained by using a durable ring in between solid bushing and hardened pin, keeps constant lubrication and eliminates friction during operation. Least wear results in least chain stretch and prolongs its service life.

PRESS-FIT CHAIN LINK TOOLS

Since about 1990, most new chains use press-fit type side plates on the connecting links. On this type of link, the side plate can not be installed properly without the aid of a special tool. The chain manufacturers have decided the press fit adds strength to the connecting link and should always be used. The Motion Pro chain press tools below are designed to install the press-fit connecting links on 520-530 standard and O-ring chains.

- Versatile enough to be used on cam chains or drive chains
- Will break chains from #35 to #630
- For chain 520 and up, it is recommended to grind to rivet head
- Each kit includes 3 pin sizes to fit most chains
- Features new & improved investment-cast-hardened body and redesigned body bolt
- Now the kit includes press places
- Recommended for light to medium duty use

SINTERED METAL PADS

- An excellent, economical choice for replacing OEM sintered metal brake pads
- Pad consists of 50-60 percent copper combined with carbon, ceramic, tin and abrasives
- Iron backing plate is plated with copper to make it a stronger bond with the pad friction material
- Powerful stopping power in wet or dry conditions
- Excellent initial pad bite, lower lever effort and minimal pad bed-in time required
- Can be used with stainless steel rotors
- Pad material is aramid fiber, metals, abrasives and lubricants mixed with Phenol Resin
- Metal powder components exceed 50 percent of pad material
- Excellent pad life
- Can be used with stainless steel rotors
- Give superior stopping power with no fade
- Excellent initial brake pad bite
- Good feel at the lever
- No bedding-in is required
- Hard brake pad backing plate will not warp, even under extreme use
- Superior stopping power with no fade
- Excellent initial brake pad bite that is not as aggressive as the R/L compound
- Slightly more progressive feel at the lever

CERAMIC SEMI-METALLIC PADS

- Many fibers, natural and man-made have been researched and combinations of several fibers like Aramid fiber, Ceramic fiber, Carbon fiber and Metal (copper and brass powder) fiber etc.
- Soft –mild braking control, Controllable pad on first braking with safety
- Good initial bite
- HH stopping power pad (Ameca test result)
- Low disc attack
- Long life pad

BRAKE SHOES

- High friction

PROX BRAKE PADS

ProX sintered metal brake pads! The ProX brake pads are produced under a very strict sintering process. In this sintering process metallic particles are fused together in combination with heat and pressure.

Sintered brake pads in general have superior material properties which very well resist high temperatures during heavy braking and offer greater durability over organic brake pads. The ProX sintered brake pads offer strong controllable brake power in combination with long life. The pads are designed to come as a softer compound front pad and little harder compound pad for the rear pads.

A complete range of sintered brake pads for MX, Dirtbike and ATV is available from ready stock!

CYCLEFLEX BRAKE LINES

Russell's Cycleflex Off-Road/Dual-Sport/Motocross brake hoses are engineered to deliver optimum performance and reliability. Cycleflex hoses feature our PowerFlex Hose Series that utilizes a Teflon® inner liner supported by a rugged 308 stainless steel outer jacket.

This combination ensures a lightweight assembly that withstands prolonged flexing, aging and vibration without expansion, delivering enhanced brake performance.

A section of hard tube prevents the hose from fouling the wheel or fender during suspension travel.

Factory Connection Shock springs fitment to each shock body is the absolute best in the industry. The highest tensile strength commercial grade silicone spring wire is pre-inspected.

Our springs are manufactured on precision CNC equipment and the best shot peening machines are utilized to improve spring stress and spring longevity. We have tested some of our Shock springs up to 500,000 cycles for durability which exceeds the OEM industry standard of 200,000 cycles. Each spring series must pass a rigorous 11 category Quality Assurance inspection process before they are approved for sale. We regularly review, test and re-design our springs to insure their overall fitment, stress levels and quality to provide the best performing and longest lasting spring available.

FORK BUSHING OIL & DUST SEAL KITS

- Patented fork seal features a balanced 3 lip design that evenly distributes the pressure reducing operating temperature, wear and friction.
- Custom Elastomer fork seals have been tested to outlast OEM fork seals. Extends typical seal life by 3 to 5 times over OEM seals.
- Stiction (friction) measures from 1/3 to 1/2 less than OEM seals for smoother fork action.
- Lower stiction, longer life! It doesn't get any better than this!
- Plus, the only complete line of dust wipers! Wipers should be replaced with the fork seals to assure peak performance.

WHY STICKY RUBBER? - STICKY RUBBER COMPOUND is a slow-rebound rubber for the ultimate in grip and traction control. This rubber acts like a form of suspension that actually grips the cement starting pad and conforms to the trail instead of slipping or bouncing. If getting the holeshot every time is what you're looking for, then **STICKY RUBBER** is what you want.

BENEFITS OF STICKY RUBBER?

1. Soft and sticky alternative to regular type compound
2. Improved traction especially on hard packed dirt and cement start pads
3. Low temperature/quick warm up feature
4. Suitable for applying ice studs

STARCROSS® MS3 *Soft-Intermediate Motorcross Tire*

Developed for intermediate to soft tracks, Starcross® MS3 tires helped win six MX world championships. Starcross® MS3 tires deliver the best traction of all Michelin® motocross tires on loose dirt, thanks to their widely spaced knobs. The front Starcross®MS3 tire excels in steering precision and braking performance.

- M-Block System with scoop-like knobs that easily penetrate soft dirt
- Reinforced knobs resist wear on harder tracks
- Widely spaced knobs facilitate mud evacuation
- Visible treadwear indicator: when the 'M' disappears, Starcross® tires can be reversed on the rim
- Differential rigidity casing: Super-stiff sidewalls for high-impact shock absorption, while the flexible tread area minimizes rebound on rough tracks

STARCROSS® SAND 4 *Sand Motorcross Tire*

The Michelin® Starcross® Sand 4 tire was developed for sandy tracks like Southwick, where conventional tires struggle for traction and cornering grip at extreme lean angles. The scoop-like knob placement of Starcross® Sand 4 tires helps provide excellent traction without digging in. Already a proven winner at the legendary Le Touquet beach race, Starcross® Sand 4 tires are available in two rear sizes for all current motocross bikes.

- Rear motocross tire specifically for use on sandy tracks
- Recommended for use with S12 XC™ or Starcross® MS3 front tires
- Scoop-like knob placement for traction in deep sand
- Widely spaced rows of knobs help evacuate sand
- Zigzag orientation of side knobs aids cornering grip
- Rubber mixture developed to perform well even in cooler temperatures
- Designed for low inflation pressure: Starcross® Sand 4 tires can be used at pressures as low as 12 psi.
- Specific knob pattern for 125's or 250 4-strokes: additional side knobs on the 100/90-19 size help minimize digging in, to avoid power loss with smaller bikes.
- Bib Mousse® fitment: Bib Mousse® M22 recommended for 100/90-19 Starcross® Sand 4 tire; Bib Mousse® M199 recommended for 110/90-19 Starcross® Sand 4 tire.

- Proven, championship-winning tread designs remain unchanged from original S12™ tires
- Aggressive shoulder knob design promotes cornering stability
- Soft- to intermediate-condition tire for motocross or offroad
- Tall, narrow knobs for mud penetration

IMPORTANT NOTICE After installing Ride-On TPS Motorcycle Formula sealant into your tires you may notice a slight vibration until the sealant has warmed up and distributed evenly in your tires. This process usually takes 2 to 5 miles. Please DO NOT attempt to rebalance tires after the installation of Ride-On TPS Motorcycle Formula. Ride-On TPS is a balancing compound. Ride-On TPS will act as a balancer and will result in erroneous readings from a dynamic spin balancer that does not compensate for tire deflection, weight of the bike, brakes, or other suspension components. Ride-On is TPMS friendly, however it is not recommended for use in 2009, 2010, and 2012 Honda Gold Wings as their TPMS Sensors are not hermetically sealed.

BALANCE With one installation of Ride-On, lead weights become a thing of the past. While Ride-On works in conjunction with traditional weights, you won't need them anymore. Ride-On is specially formulated to hydrodynamically balance high-speed tires and dampen road noise and vibrations that cause a rough ride. The great thing is Ride-On will continue to adjust and literally rebalance your tires as you ride for the legal life of the tires. So go ahead, pop off those wheel weights, shine your wheels, and enjoy the smoothest ride you have ever experienced on your bike.

SAFETY FIRST With Ride-On TPS tire sealant, your tire literally fixes itself! If your tire is punctured, the centrifugal force of the rotating tire and the internal air pressure force Ride-On into the hole, sealing it virtually instantly. Since it helps eliminate porosity leaks that cause tires to deflate over time, your tires stay properly inflated, last longer, your bike handles better and gets more miles per gallon.

WORKS IN TUBE AND TUBELESS TIRES Ride-On TPS eliminates 85-95% of flats in tubeless tires from objects up to 1/4" (1/8" for tube tires) that penetrate the contact patch of the tire. Since puncturing objects often tear tubes, Ride-On's efficiency in tube tires is reduced to 55-65%. If the puncturing object remains in the tire, it is vital to remove it as soon as possible to prevent further injury to the tire or tube. Our company takes the position that any repair in a motorcycle tire should be treated as temporary.

The LED Smart Cap Tire Pressure Monitor (TPMS) valve cap is a must for people that want to make sure that their tires are properly inflated. Once installed the LED Smart Cap TPMS valve cap will alert you if the tire pressure drops by a setpoint pressure. The Light Vehicle version of the Smart Cap Tire Pressure Monitor system is available for automobiles, SUVs, light trucks, vans, motorcycles, scooters, trailers, ATVs, etc. with a pressure range of 10 to 70 psi and a low pressure warning trigger of 4 psi (with a +/- 10% accuracy).

- Easy to Install - Simply screw valve caps onto tire valve stems.
- Bright blinking LED light that is visible in daylight and night time
- Self-Calibrating - Automatically calibrates to pressure the tire was set at when the cap was installed. The same valve can be used with tires from 10 psi to 70 psi (Auto and Motorcycle Version with a 4 psi pressure drop alarm) or 30 to 170 psi for commercial version (available in 4 psi or 8 psi pressure drop alarm)
- Automatically compensates for ambient temperature changes to avoid false alarms.
- Comes with integrated anti-theft device.
- Long lasting low pressure alert - blinking red light alerts of low pressure for 750 hours (more than a month).
- Low battery alarm - the led valve cap will blink yellow for up to 100 hours to alert you that the batteries are running low.
- Long Lasting 3 year battery shelf life.
- Great compliment to Ride-On TPS filled tires - 100% compatible and now you can be alerted of a slow leak.
- Proper tire inflation pressure helps extend tire life.
- Proper tire inflation pressure helps optimize fuel economy and save up to 3% in fuel.
- Available in 2 and 4 pack blister Packaging, as well individual and bulk packaging.

REMOVES WATER FROM FUEL

The Fuel Filter Funnel by Mr. Funnel is a heavy-duty, anti-static, and fast flow funnel with built-in filter technology. When fuel is poured through the Fuel Filter Funnel, water and debris will not pass through the filter's fluoropolymer-coated stainless steel filter. Only filtered fuel flows through to your engine, improving its efficiency, durability, and proper operation. The sump area collects the deflected water and debris for proper disposal. The Fuel Filter Funnel by Mr. Funnel will filter gasoline, diesel, heating oil, kerosene and 2-cycle mixed gas.

What Model Do I Need?

The Mr. Funnel Fuel Filter comes in four different fast-flow models (See below). Models differ mainly on flow rate. If your need is to transfer five gallons or less of fuel, then the F1 and F3 are for you. If you are transferring more than 5 gallons, then the F8 and F15 are right for you. Our F15 is our fastest flow model at up to 15 gallons per minute! This model can also be used at a fuel pump. Get your Mr. Funnel Fuel Filter today, and keep your engine running smooth!

GRUNGE BRUSH™

Chain and gear cleaning has never been faster or easier! Scrub the chain with the horseshoe shaped bristles at one end of The Grunge Brush™ to clean all four sides of the chain. Use the long bristles on the other end of the brush to clean components like sprockets, derailleurs, cranksets, brakes and pedals.

Regular component cleaning prevents premature wear and tear on chain and sprockets, eliminates chain skipping caused by dirt and grunge, and assures smooth operation of drivetrain and brakes.

The Grunge Brush™ can be used dry or for deep cleaning action, use it with Citrus Bike Chain Degreaser or Multi Bike Degreaser, by simply spraying degreaser onto the chain or directly onto bristles. Grunge Brush™ scrubbing action, coupled with a Finish Line bike degreaser, will leave your drivetrain looking like new

Popularity of these four models allows greater production economics without sacrifice of quality and we pass these savings on to you. The 400 Series clutches have more contact surface than most competitors. The 400 Series clutch has built-in staying power. Almost 3-3/4 square inches of steel friction material engagement shoe surface assures positive pulling power as long as the R.P.M. is in full contact range. There's no slipping when you need the "go-power". The 400 Series clutches have continued performance even when they were partly destroyed in torture tests. Bearings have been almost completely worn through by sand and the 400 Series continued to function.

TIPS FOR PROPER BELT ADJUSTMENT USING 6" OR 7" DRIVEN UNITS

1. Select belt for nearest approx. shaft setting.
2. Check belt tension. Belt should be at its highest point in the driven pulley flanges. Remove outer half of driven clutch. Squeeze belt down and pull forward as shown. Position engine so that 1/8" to 3/16" of clearance is provided around clutch bushing/hub. NOTE: By increasing the spring tension of the torque system...the power ratio of the system (driver and drive) is held longer at higher engine rpm's before it is overcome by driver. To shorten the time required for the driven member to attain ratio, DECREASE the amount of spring tension of the torque cams. This will allow the rpm of the drive clutch to move power ratio of the driven unit at a faster rate in a lower rpm.
