HIFLOFILTRO®
PREMIUM FILTERS

WHY HIFLO?

Providing unbeatable performance and exceptional value, Hiflofiltro is the best-selling brand of aftermarket filters for motorcycles, scooters, and ATVs worldwide. The filters are also supplied to original equipment manufacturers as well as private label brands.

Materials

To achieve our quality aims and to ensure the consistency of our products, we use only premium materials from well known manufacturers: steel from Toyota Tsusho and NKK Japan, glue from Henkel Germany, filter paper from Ahlstrom Filtration Finland, Hollingsworth & Vose USA and Awa Paper Japan.

Production

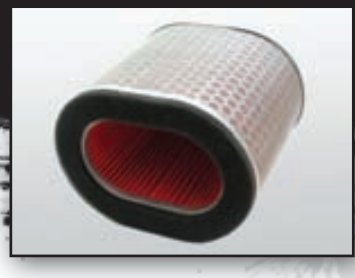
The Hiflofiltro-Thai Yang Kitpaisan factory was founded in 1955 and has been manufacturing filters for the OEM motor industry since 1963. With the experience of more than four decades, continuous research and development and modern production facilities, we manufacture some of the best quality filters in the world.

Quality Control

Every oil filter goes through 16 individual quality control checks before it is ready to leave the factory. The whole manufacturing process, including the checking of raw materials, individual filter testing, is regularly audited and verified independently by TÜV SÜD.

OE REPLACEMENT AIR FILTERS

Hiflofiltro air filters are manufactured to fit the factory air box and are a direct replacement for original equipment filters. Top quality powerflow filtering media, developed for modern high performance engines.



DUAL-STAGE RACING FOAM AIR FILTERS

Competition off-road air filters manufactured in the Netherlands using a special dual-layer foam, formulated for maximum filtration and optimum air flow for improved power. Top quality materials and superior construction allow the filter to be used over and over again without any loss of performance.

PREMIUM OIL FILTERS

Hiflofiltro is the world's first TÜV approved oil filter. Constructed using the best materials available, all Hiflofiltro oil filters meet or exceed original equipment performance levels.

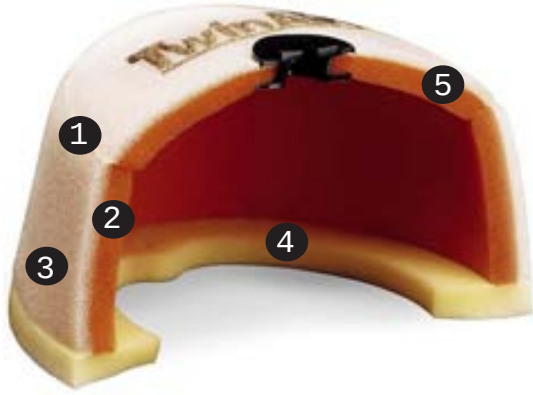
TWIN AIR STREET BIKE AIR FILTERS



Twin Air Filter's design, high quality materials and superior construction deliver unbeatable performance and protection - and make Twin Air Filters the hands-down choice of more World & National Champions than all other filters combined.

1. Coarse open-pore foam catches airborne dirt, grime and sand.
2. Fine open-pore inner foam acts as a second filter to trap the smallest particles while ensuring maximum air passage.
3. Exclusively formulated adhesive ensures glue seams will not break down.
4. Thick, flat foam, greaseless sealing ring ensures maximum contact with your airbox, while acting as a breathable gasket for increased air passage.
5. Fused outer and inner elements prevent dirt and grime from being lodged between layers, unlike Twin Air, this can be a problem with inferior two-piece designs. Trapped particles can restrict airflow. And if dirt works it's way into your engine, a pinhead-sized granule will gouge your cylinder, piston and rings like a bullet.

Twin Air filters are designed to increase airf ow while ensuring the highest level of protection from dirt/dust.

SINTERED METAL PADS

- An excellent, economical choice for replacing OEM sintered metal brake pads
- Pad consists of 50-60 percent copper combined with carbon, ceramic, tin and abrasives
- Iron backing plate is plated with copper to make it a stronger bond with the pad friction material
- Powerful stopping power in wet or dry conditions
- Excellent initial brake pad bite, lower lever effort and minimal pad bed-in time required
- Can be used with stainless steel rotors
- Pad material is aramid fiber, metals, abrasives and lubricants mixed with Phenol Resin
- Metal powder components exceed 50 percent of pad material
- Excellent pad life
- Good feel at the lever
- No bedding-in is required
- Hard brake pad backing plate will not warp, even under extreme use
- Superior stopping power with no fade
- Excellent initial brake pad bite that is not as aggressive as the RJL compound
- Slightly more progressive feel at the lever

CERAMIC SEMI-METALLIC PADS

- Many fibers, natural and man-made have been researched and combinations of several fibers like Aramid fiber, Ceramic fiber, Carbon fiber and Metal (copper and brass powder) fiber etc.
- Soft–mild braking control, controllable pad on first braking with safety
- Good initial bite
- HH stopping power pad (Ameca test result)
- Low disc attack
- Long life pad

BRAKE SHOES

- High friction

EMGO BRAKES

EMGO Replacement Disc Brake Pads meet or exceed manufacturers specifications. Replacement pads are available in two types, Sintered and Full Metal. Sintered Metal is a high performance brake pad material designed from a highly refined composition of metallic powder pressed into a preform mold. EMGO Full Metal pads are made of additional metallic compounds for higher friction and durability. Sold by the pair, (some models require more than one set)

EMGO Replacement Brake Shoes meet or exceed manufacturers specifications. They are available in two types: Replacement OEM (standard) and water grooved, which are slotted to help channel water and dirt away from the braking surface. Sold by the pair (some models require more than one set), each set is boxed. Like our pads, we label each set with application information and each box has a reinforced hang tab for point of sale display.

STREET BIKE BRAKE HOSES (CLEAR)

Russell's Cycleflex Street Brake Hose Kits incorporate the convenience and reliability of factory assembly for trouble-free installation, requiring no additional components. Our precision double crimp technology ensures permanent end attachment and precise alignment for uncompromised fit. Street Brake Hose Kits are engineered utilizing a Teflon® inner liner, supported by a rugged 308 stainless steel braid. This stainless steel braid eliminates the brake hose expansion that factory rubber hoses experience, resulting in better braking performance and improved lever feel. Cycleflex street bike brake hose kits duplicate the routing of the factory brake hoses (including sport bikes with a two line arrangement from the factory), and come complete with all necessary hardware. The stainless steel braid enhances the appearance of any street bike, and when you consider that in most cases CycleFlex brake hoses are less expensive than the original rubber hoses, you have a value that can't be beat! Cycleflex Street Brake Hoses meet all the guidelines of the D.O.T. MVSS-571.106 requirements to deliver an extra margin of safety and are 50-state legal.

SPEED BLEEDERS® - TAKE THE WORK OUT OF BRAKE BLEEDING

The Russell Speed Bleeder simplifies the troublesome job of bleeding your brake system and makes bleeding your brakes a one person task. Replace your original bleeder screw with our patented Speed Bleeder and you are ready to start. All you do is open the Speed Bleeder 1/4 to 1/2 turn and pump your brake lever continuously. Our patented check ball design allows the old fluid and air to be pushed out, but closes between pumps, preventing the old fluid or air from getting back into the system. When all the old fluid is purged from the system, tighten the Speed Bleeder and you're done! Speed Bleeders are available for stock or aftermarket calipers.

TECH TIP

After installing your new Cycleflex brake hoses, your brake system will have to be bled, of course. here are a couple of tips that will make this task much faster and easier.

1. Speed Bleeders are available for most motorcycles, cars, trucks, and virtually anything else with hydraulic brakes or clutch. First, we suggest that you prime your new hoses before installation. Using the proper brake fluid and an eyedropper or small syringe, squirt brake fluid into one end of the hose until it comes out the other end. You do not have to completely fill the hose, as long as the inside of the Teflon® liner is coated with fluid.

2. Install the hose using new sealing washers and torquing the banjo bolts to factory specifications. Now install Russell's patented new Speed Bleeder in place of the original bleeder valve in the caliper. The Speed Bleeder has a spring-loaded stainless steel check ball in it that allows for one person brake bleeding.

3. Open the Speed Bleeder 1/4 to 1/2 turn and continuously pump the brakes. Every time you pump, the check ball is pushed off its seat, allowing the fluid and air out. Between pumps, the spring closes the check ball, preventing any air from getting back into the system. Make sure you keep the master cylinder reservoir full during bleeding.

4. When all the air is bled out of the hoses, tighten the Speed Bleeder down and you're done!

Speed Bleeders are available for most motorcycles, cars, trucks, and virtually anything else with hydraulic brakes or clutch.

RUSSELL TWO LINE RACER UNITS (CLEAR)

Russell's Cycleflex Two-Line Racer Kits utilize a Teflon® inner liner supported by a stainless steel outer jacketing to eliminate brake hose expansion for a firm brake lever time after time. These kits consist of two brake hoses that connect directly to the master cylinder using a double length banjo bolt (supplied), with the longer hose attaching to the left caliper, shorter to the right caliper. This eliminates the OEM three hose set-up and brake junction making brake service at the track simpler and improving brake performance. All two line racer kits come with extruded clear coat to protect against abrasion of painted surfaces. Cycleflex Two-Line Racer Kits meet all the guidelines of the D.O.T. MVSS-571.106 requirements to deliver an extra margin of safety and are 50-state legal.

RUSSELL TWO LINE RACER UNITS (SMOKE)

Russell's Cycleflex Two-Line Racer Kits utilize a Teflon® inner liner supported by a stainless steel outer jacketing to eliminate brake hose expansion for a firm brake lever time after time. These kits consist of two brake hoses that connect directly to the master cylinder using a double length banjo bolt (supplied), with the longer hose attaching to the left caliper, shorter to the right caliper. This eliminates the OEM three hose set-up and brake junction making brakeservice at the track simpler and improving brake performance. All two line racer kits come with extruded clear coat to protect against abrasion of painted surfaces. Cycleflex Two-Line Racer Kits meet all the guidelines of the D.O.T. MVSS-571.106 requirements to deliver an extra margin of safety and are 50-state legal.

SPEED BLEEDERS® - TAKE THE WORK OUT OF BRAKE BLEEDING

The Russell Speed Bleeder simplifies the troublesome job of bleeding your brake system and makes bleeding your brakes a one person task. Replace your original bleeder screw with our patented Speed Bleeder and you are ready to start. All you do is open the Speed Bleeder 1/4 to 1/2 turn and pump your brake lever continuously. Our patented check ball design allows the old fluid and air to be pushed out, but closes between pumps, preventing the old fluid or air from getting back into the system. When all the old fluid is purged from the system, tighten the Speed Bleeder and you're done! Speed Bleeders are available for stock or aftermarket calipers.

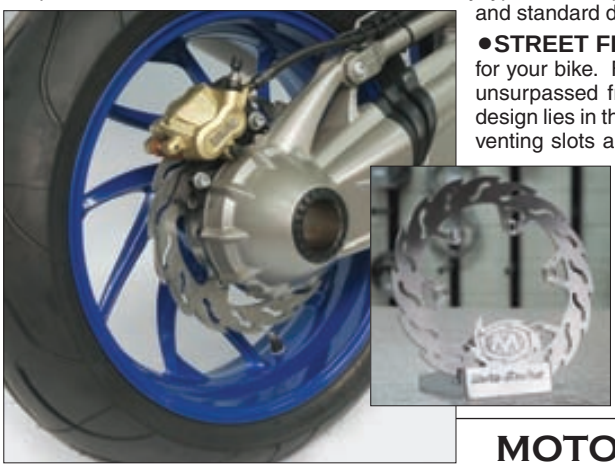
MOTO-MASTER BRAKE DISCS

•STREET STANDARD REPLACEMENT DISCS Moto-Master street replacement rotors provide a bolt-on performance boost to your bike. Our flame design rotor is a multi- superbike-championship winner that provides instant improvement over a standard OEM rotor. They are made from special hardened and tempered premium quality steel. This material guarantees for extremely little rotor wear and best performance. They are lasercut, CNC drilled and precision surface machined to provide perfect fitting and flatness. This ensures a perfect feel with more stopping power while applying less pressure to the brake lever. Our revolutionary flame design provides optimal cooling and brake pad cleaning without tilting of the pads. Moto-Master rotors can be used with any type of brake pads including sinterbronze, kevlar and ceramic carbon pads. Available in flame and standard design according to reference.



•STREET FLAME DISCS Moto-Master Flame is an instant bolt on performance upgrade for your bike. Featuring premium quality stainless steel which gives Moto-Master brake discs unsurpassed friction characteristics and durability. The superior performance of the Flame design lies in the unique flame shaped design. The outer ring features the flame shaped design venting slots and outside perimeter which ensures an equal contact between brake pad and disc throughout the entire rotation of the disc. This design provides a smooth and predictable braking action, resulting in the rider being able to brake harder while giving optimal feel on the lever during brake engagement. The laser-cut and precision grinded outer ring is fixed to a billet CNC machined aircraft grade aluminum carrier, which is anodized and laser marked. Newly designed stainless steel floaters are added to complete the packaged.

SEALED (O-RING) DRIVE CHAIN

Specifically designed with sealed-in lubrication, makes KMC sealed chain work to its optimum life. Superior alloy steel is used and heat-treated to provide best performance in strength. In addition, specially formulated grease contained by using a durable ring in between solid bushing and hardened pin, keeps constant lubrication and eliminates friction during operation. Least wear results in least chain stretch and prolongs its service life.

Quadra's X-Ring design reduces friction by as must as 40% because of smaller contact areas. The X-Ring's 4 point contact patch also offers better sealing than conventional o-rings. Lab tests show the Quatra X-ring chains last 50% longer that a standard O-ring chain!

ZERO STRETCH TECHNOLOGY

ZST ZERO STRETCH TECHNOLOGY

EK Chain's new Zero Stretch Technology virtually eliminates measurable chain stretch in the first 1000km of use. ZST puts an end to the hassle of retensioning the chain after the initial break-in period, when most chain stretch occurs. For racers, this can mean going several race weekends without a single chain adjustment. You also get the confidence of knowing that a chain with ZST will stay within wear tolerances throughout its entire service life. ZST is standard on the 530ZZZ chain, and available as an option on some MVXZ series chains.

SPRING CLIP LINK TYPE 42
This link is a good compromise of installation and the safety level, as it is much more resistant to fatigue than the slip fit connecting link type 26. It should be used only for low power applications on motorcycles having low displacement (max 400 cc) or for short distances at moderate speed.

EK STANDARD AND OPTIONAL CONNECTING LINKS

Some of the EK chains in this catalog are available with different style connecting links. All are easy to install, however some like the (Rivet-type) link require a special rivet tool. This tool can be purchased separately

MASTER-RIVET-TYPE

The MLJ is our most dependable connecting link, more commonly used on street machines. Requires special riveting tool to install.

CLIP-TYPE (SEMI-PRESS FIT)

The SKJ is easy to install and very similar to a standard SPJ link. The SKJ's re-designed link plate requires additional pressure to push onto the connecting pins but offers increased dependability and a tighter fit. Comes standard with many motocross, off-road, ATV and drag racing chains. Can be easily installed with a standard pair of pliers.

SLJ: SCREW TYPE

The SLJ is easy to install and a very dependable alternative. Patented mechanism allows easy installment with a wrench and a pair of pliers. Available only as option for selected sealed chains.

SCREW TYPE MASTER LINK

EK's screw type master links do not require any special tools for installation. This unique patented link gives a rivet-like fit, using only an 8mm wrench and a pair of pliers.

The new, high-performance, outstanding ZR chains take a big step forward with the new patented Z44 seal rings. These new generation seal rings, which feature a special-designed conical shape on their inner side, are the result of the evolution of previous X-ring and Z-ring designs.

Features of this design are:

- Patented “Z” ring section.
- The Z-ring flexes when assembled, creating a spring effect that guarantees the seal will not diminish over time.
- The lubricant trapped between the plates and the lobes of the Z-ring keeps the ring lubricated and increases its life.
- ZR chains are the best choice for the most severe and demanding applications. Among other characteristics, the ZR chains feature high alloy steel plates and pins, solid bushings and rollers, shot-peening of plates, pins and rollers, performance-enhancing pre-stretching and “gold” outer plates.

PRESS-FIT CHAIN LINK TOOLS

Since about 1990, most new chains use press-fit type side plates on the connecting links. On this type of link, the side plate can not be installed properly without the aid of a special tool. The chain manufacturers have decided the press fit adds strength to the connecting link and should always be used. The Motion Pro chain press tools below are designed to install the press-fit connecting links on 520-530 standard and O-ring chains.

- Versatile enough to be used on cam chains or drive chains
- Will break chains from #35 to #630
- For chain 520 and up, it is recommended to grind to rivet head
- Each kit includes 3 pin sizes to fit most chains
- Features new & improved investment-cast-hardened body and redesigned body bolt
- Now the kit includes press places
- Recommended for light to medium duty use

FORK SPRINGS

PROGRESSIVE suspension

PROGRESSIVE RATE FORK SPRINGS
The 'Original' Progressive Rate Fork Springs soak up the small road bumps, yet are firm enough to absorb the molar-rattling ones. Spring rates have been chosen to reduce front end "dive" during braking, yet still provide excellent ride comfort. Better yet, we warranty our fork springs for life! Progressive Rate Fork Springs have several advantages over straight rate springs. A Progressive Rate Spring has the advantage of a rising rate resistant to compression. The benefit of this is that the spring can be soft enough at the start of the travel to offer a "plush" ride, yet be firm enough at the end of the travel to soak up the big bumps.

SUSPENSION SHOCKS

The 412 Series shocks are simply the best value shock there is on the market today. The 412's simple, durable design means they will be an improvement to your motorcycle's suspension performance for miles to come.

The double wall steel body construction with nitrogen charged, multi-staged velocity sensitive valving gives you smooth, consistent damping. A five position cam style preload adjuster lets you dial in your ride whether you're a light rider or heavy hitter.

Select bike models have multiple options like full show chrome or black covers, chrome or black springs in progressive rate, Standard or Heavy Duty, and lengths from 11" to 14.2", there is sure to be a 412 that's right for you and your ride. Not all combinations are available for all bike models.

- Precision double walled, steel bodies to protect the inner cylinder and provide consistent damping.
- Choose the length you want (11.0" to 14.25") to suit your handling requirements or for a lowered, custom look. (Depending on application).
- Five position cam style preload adjuster.
- Precision ground, hard chromed steel shaft for strength and durability.
- Multi-stage, velocity sensitive internal valving for the ride and handling you want.

Standard Shock Applications are recommended for bikes as sold new, excluding any bolt on accessories with rider weight under 200 lbs and limited passenger use.

FORK OIL & DUST SEAL KITS

ALL BALLS FORK AND DUST SEAL KITS

- Patented fork seal features a balanced 3 lip design that evenly distributes the pressure reducing operating temperature, wear and friction
- Custom Elastomer Fork Seals have been tested to outlast OEM fork seals. Extends typical seal life by 3 to 5 times over OEM seals
- Stiction (friction) measures from 1/3 to 1/2 less than OEM seals for smoother fork action
- Lower Stiction, Longer Life! It doesn't get any better than this!
- Plus, the only complete line of dust wipers! Wipers should be replaced with the fork seals to assure peak performance

Tire Measurements Explained. Example: 130/90-16

The 130 designates the tire's width in millimeters, measured in a straight line through the tire from one edge of the tire's tread to the other. The second number, 90, is a bit trickier to understand. This represents the aspect ratio between the tire's width and its height, or how tall a tire is in relationship to its width. Simply put, the higher this number is, the taller the tire will be. In this case, the tire is 90 percent as tall as its width, or 117mm. 16 Represents the rim size.

What makes Avon tires different?

Top-grade materials. High-tech design and manufacturing. More than a century of experience and an unwavering eye for quality. They all play a part in making our tires a superb choice for your motorcycle.

Before any tire even makes it onto the drawing board, the first consideration is always its end use.

Will it be ridden at high speeds, hour after hour?
Can it withstand the bumps and scrapes of everyday life?
Will it be put through its paces on road, off road or track?

The answers to these questions determine the characteristics of our tires. So every tire is different and every one must undergo specialized testing to ensure that it performs as well and for as long as you expect.

Michelin Commander 2 launches a new motorcycle tire which delivers unrivaled tire life. Independent tests carried out in the United States using a Harley-Davidson® Electra Glide® Classic prove it: a rear MICHELIN Commander II is capable of covering up to 40,000 kilometres*. That's nearly twice the distance covered by its direct competitors, while the longevity of the front tire is even greater. The MICHELIN Commander II creates a new standard with regard to durability, yet without making any compromises in terms of wet weather grip, maneuverability or stability. This performance balance provides yet another eloquent illustration of Michelin's research and development philosophy: no performance gain to be achieved on one front to the detriment of another.

In response to the major problem faced by custom motorcycle riders – tire life, notably at the rear –, the engineers at the Michelin Technology Centre at Ladoux, near Clermont-Ferrand (France), have developed a new rubber compound. The carcass of this new radial tire is associated with Silica Rain Technology (SRT) which integrates silica into the compound of the tire tread, while the MICHELIN Commander II's tread pattern has been designed to prevent all forms of uneven wear.

The exclusive architecture of the MICHELIN Commander II brings both maneuverability and stability. The tire's more rigid, high-density carcass improves maneuverability, while the aramid fiber crown ply of the rear tire enhances resistance and lightness for impeccable stability, even at high speeds.

Specially street-tuned sport tire derived from latest racing tire BT-003. Its Ultimate Grip Performance derived from MotoGP technology provides riders sporty riding enjoyment with confident grip on streets and dry-condition circuits.
Street Sport Tire with Ultimate Grip Performance is derived from MotoGP technology.
Designed for Sporty Riding enjoyment with confident grip on streets and dry-condition circuits.
Specially street-turned tire developed from our latest racing tire BT-003 which has achieved many victories in production-class races (600cc-1000cc).
BT-003RS is the successor to BT-002RS and BT-090 and covers various engine sizes and models (from middle sport class to super sport class).

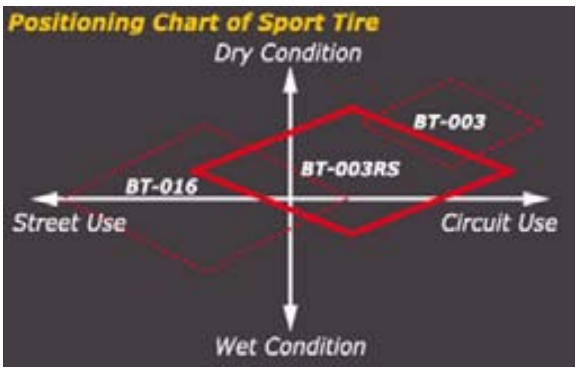
The 3LC (3 Layer Compound) and 5LC (5 Layer Compound) provide regular wear and the optimized pattern design provides longer wear life than ex-models

TECHNICAL FEATURES

"Ultraction Compound" was developed to achieve the best possible grip performance on public roads and dry circuits. All compounds in BT-003RS are superior in road-holding grip, especially this newly developed "Ultraction Compound" used in the shoulder part of the tread which improves road-holding grip spectacularly.

• "Ultraction Compound" is adopted for Super Sport size only.

The 3LC (3 Layer Compound) created from MotoGP pure racing technology also helps optimize the performance of every compound by putting the right compound in the right part of the tread.



PATTERN

S shaped grooves across center of tread improve contact feeling, braking grip (for Front Tire) and traction grip (for Rear Tire).
Reducing Negative Ratio in shoulder part of tread improves turning ability.

Longer Shoulder grooves than BT-003 Racing enhance WET grip and shock absorption on public roads.

Optimized angle and shape of grooves contribute to noise reduction and improved mileage

IMPORTANT NOTICE

After installing Ride-On TPS Motorcycle Formula sealant into your tires you may notice a slight vibration until the sealant has warmed up and distributed evenly in your tires. This process usually takes 2 to 5 miles. Please DO NOT attempt to rebalance tires after the installation of Ride-On TPS Motorcycle Formula. Ride-On TPS is a balancing compound. Ride-On TPS will act as a balancer and will result in erroneous readings from a dynamic spin balancer that does not compensate for tire deflection, weight of the bike, brakes, or other suspension components. Ride-On is TPMS friendly, however it is not recommended for use in 2009, 2010, and 2012 Honda Gold Wings as their TPMS Sensors are not hermetically sealed.

BALANCE

With one installation of Ride-On, lead weights become a thing of the past. While Ride-On works in conjunction with traditional weights, you won't need them anymore. Ride-On is specially formulated to hydrodynamically balance high-speed tires and dampen road noise and vibrations that cause a rough ride. The great thing is Ride-On will continue to adjust and literally rebalance your tires as you ride for the legal life of the tires. So go ahead, pop off those wheel weights, shine your wheels, and enjoy the smoothest ride you have ever experienced on your bike.

SAFETY FIRST

With Ride-On TPS tire sealant, your tire literally fixes itself! If your tire is punctured, the centrifugal force of the rotating tire and the internal air pressure force Ride-On into the hole, sealing it virtually instantly. Since it helps eliminate porosity leaks that cause tires to deflate over time, your tires stay properly inflated, last longer, your bike handles better and gets more miles per gallon.

WORKS IN TUBE AND TUBELESS TIRES

Ride-On TPS eliminates 85-95% of flats in tubeless tires from objects up to 1/4" (1/8" for tube tires) that penetrate the contact patch of the tire. Since puncturing objects often tear tubes, Ride-On's efficiency in tube tires is reduced to 55-65%. If the puncturing object remains in the tire, it is vital to remove it as soon as possible to prevent further injury to the tire or tube. Our company takes the position that any repair in a motorcycle tire should be treated as temporary.

S100 TOTAL CYCLE CLEANER

If you've been using a bucket of car suds or a quick detailer, chances are you been missing the most important and threatened places on your bike… those hidden nooks and crannies where dirt can hide. Why isn't that ok? Dirt traps moisture and the moisture can't dry out. The result is corrosion, rust and tarnish and you can't even see it happening! S100 Total Cycle Cleaner works differently by creeping to find the hidden soils you can't see, then penetrating and loosening them so a sharp stream of water can remove them. The result is a bike that is clean everywhere, not just where can see. Simply put, it's better for your bike. (You don't have to tell your friends it's quick too.)

S100 SHINE-ENHANCING CLEANSER AND S100 CARNAUBA PASTE WAX

Ready to get the ultimate shine? Experts agree that waxes with cleaners in them are compromise products, that the cleansing and waxing steps must be done separately, so that's what we've done. Use our two step S100 Cleanser and S100 Paste Wax system, we can virtually guarantee you can put your bike in a show! Get your bike clean and dry, then begin with our S100 Shine-enhancing Cleanser. Professional painters and detailers agree that proper surface preparation is fundamental to getting the ultimate shine. The S100 Cleanser gently removes water spots, small swirl marks and imbedded road film to set up the surface for the ultimate shine, all without scratching even sensitive clear coats! Now you're ready for the ultimate wax job with our S100 Carnauba Paste Wax. Free of abrasives and cleaners and made with a unique blend of carnauba (the world's hardest wax) and beeswax, you will be amazed at the depth of shine and darkening of dark colored surfaces. And we've eliminated two common annoyances, powdering during rubout and white stain residues on plastics and rubber! And it's so easy to apply and remove, some bikers tell us it's as easy to use as a liquid!

S100 DRYING TOWEL

There's not much point in getting a bike washed quickly, if you can't get it dried quickly. That's why we introduced the amazing S100 Drying Towel. More drying power than a natural chamois, yet it never gets stiff so it's always ready to use. Lint free, it stores in its own plastic pouch so it's ready to pull out of the saddlebag. Made from 100% biodegradable materials without using CFC's or formaldehydes.

S100 WHEEL CLEANER

Sometimes those road wheels need some extra cleaning power to get them back to that "like new" look. And, worse yet, that brake dust (it contains metallic particles!) can become corrosive if allowed to stand for awhile. If you find that brake dust build up is hard to keep up with, we recommend you try our S100 Special Performance Gel Wheel Cleaner. It provides up to 50% more cleaning power than our Total Cycle Cleaner thanks to the clinging power of its unique gel formulation. Spray on and allow to stand (you control the amount of cleaning you need, see directions on bottle), then rinse thoroughly. Neither acid, nor lye-based like cheaper products, S100 Wheel Cleaner provides complete surface safety for any type of wheel or wheel finish, including those tricky anodized finishes.

S100 CORROSION PROTECTANT

No matter how clean you keep your bike, you always have to be on the lookout for that dreaded "enemy number one", corrosion. Unless you live in the desert, humidity, salt air, spring road salt and plain old pollution threaten your bike's "precious metals". That's why we developed S100 Corrosion Protectant. Just spray on a clean, dry bike (or into a cloth) and rub into the areas you want to protect, those sensitive areas like fork tubes, case covers and wheels (and don't forget those hidden areas you can't reach.). You'll find that S100 Corrosion Protectant won't rub off easily in the rain and so its protection really lasts. It even dramatically out-performed a famous so called "corrosion fighter", so this is really the way to protect your investment!

Important note: This is the perfect product for winter lay up and long term storage. Spray directly on all sensitive areas and allow to dry.

Cycle Care Products

S100 FINISH RESTORER AND S100 POLISHING SOAP

No matter how well you take care of your bike, sometimes things happen that need "intensive care". Some overly stubborn road film, a few ugly stains, or plain old dulling and corrosion are things a biker can face. No problem! For small areas, our S100 Finish Restorer is the perfect solution. It can renew tarnished metals (aluminum, stainless, chrome etc.) to a brilliant shine, even often take small scratches out of plastics. It rubs out easier than ordinary polishes and doesn't come with that ugly ammonia smell, either! No wonder Motorcyclist Magazine called it "the nearest article to a miracle finish maintenance product…"

For larger areas, our breakthrough polishing product S100 Polishing Soap is the perfect weapon in that fight against dulling and tarnishing. This just might be the world's fastest way to polish! Forget the slow, tedious two finger polishing you know and step up to a handful of polishing power. Based on a technology used by European silversmiths, this clay and soap based polish is applied with a wet sponge (included). Wet the sponge, drag across the Polishing Soap and scrub the surface. Rinse with a hose or let dry and buff out. No smelly, oily residue and a speed that will amaze you. Pipes, fork tubes, wheels, case covers etc. get shined up in a fraction of the time it used to take. Economical, too. Outlasts a couple of tubes of ordinary polish. (Not recommended for painted or anodized surfaces.). Dozens of uses around the home are described in the booklet included.

S100 DETAIL + WAX

OK, we know there are some times when your bike isn't really that filthy, maybe just a bit dusty, rain-spotted or covered with bugs. We've got something for that, too. S100 Detail + Wax removes that dust, those spots, and the bug residue. And its unique carnauba and beeswax ingredients replace them with a "gangbusters" shine. Just think of it as a wash and wax in one! It's easy to use, too. Just spray a bit on a soft cloth or onto the bike's surface and rub to a high gloss. Pack a can in the saddlebag and you're ready for a dusty road or that surprise rain shower. No wonder an independent test rated S100 Detail + Wax "... the most consistent performer of all".

MARINE RUST PREVENTATIVE COATING

Marine Rust Preventive Coating is formulated to provide maximum protection against corrosion. In the harsh marine environment, moisture and salt continuously react with metals, causing rust and corrosion. Marine Rust Preventive Coating is an easily applied, durable barrier rust preventive that prevents the corrosive environment from direct contact with marine equipment. When correctly applied it will provide up to two years of protection against rust and corrosion. Marine Rust Preventive Coating is a waxy, dry-to-the-touch compound in an easy-to-use solvent carrier that can be applied by dipping, spraying or painting. A thin film of Marine Rust Preventive Coating will fully protect the part from rust when stored in an adverse environment, and will afford protection from the effects of handling. Sold per bottle.

IMPORTANT NOTICE

After installing Ride-On TPS Motorcycle Formula sealant into your tires you may notice a slight vibration until the sealant has warmed up and distributed evenly in your tires. This process usually takes 2 to 5 miles. Please DO NOT attempt to rebalance tires after the installation of Ride-On TPS Motorcycle Formula. Ride-On TPS is a balancing compound. Ride-On TPS will act as a balancer and will result in erroneous readings from a dynamic spin balancer that does not compensate for tire deflection, weight of the bike, brakes, or other suspension components. Ride-On is TPMS friendly, however it is not recommended for use in 2009, 2010, and 2012 Honda Gold Wings as their TPMS Sensors are not hermetically sealed.

BALANCE

With one installation of Ride-On, lead weights become a thing of the past. While Ride-On works in conjunction with traditional weights, you won't need them anymore. Ride-On is specially formulated to hydrodynamically balance high-speed tires and dampen road noise and vibrations that cause a rough ride. The great thing is Ride-On will continue to adjust and literally rebalance your tires as you ride for the legal life of the tires. So go ahead, pop off those wheel weights, shine your wheels, and enjoy the smoothest ride you have ever experienced on your bike.

SAFETY FIRST

With Ride-On TPS tire sealant, your tire literally fixes itself! If your tire is punctured, the centrifugal force of the rotating tire and the internal air pressure force Ride-On into the hole, sealing it virtually instantly. Since it helps eliminate porosity leaks that cause tires to deflate over time, your tires stay properly inflated, last longer, your bike handles better and gets more miles per gallon.

WORKS IN TUBE AND TUBELESS TIRES

Ride-On TPS eliminates 85-95% of flats in tubeless tires from objects up to 1/4" (1/8" for tube tires) that penetrate the contact patch of the tire. Since puncturing objects often tear tubes, Ride-On's efficiency in tube tires is reduced to 55-65%. If the puncturing object remains in the tire, it is vital to remove it as soon as possible to prevent further injury to the tire or tube. Our company takes the position that any repair in a motorcycle tire should be treated as temporary.

MR. FUNNEL

FLO TOOL

REMOVES WATER FROM FUEL

The Fuel Filter Funnel by Mr. Funnel is a heavy-duty, anti-static, and fast flow funnel with built-in filter technology. When fuel is poured through the Fuel Filter Funnel, water and debris will not pass through the filter's fluoropolymer-coated stainless steel filter. Only filtered fuel flows through to your engine, improving its efficiency, durability, and proper operation. The sump area collects the deflected water and debris for proper disposal. The Fuel Filter Funnel by Mr. Funnel will filter gasoline, diesel, heating oil, kerosene and 2-cycle mixed gas.

GRUNGE BRUSH™

Chain and gear cleaning has never been faster or easier! Scrub the chain with the horseshoe shaped bristles at one end of The Grunge Brush™ to clean all four sides of the chain. Use the long bristles on the other end of the brush to clean components like sprockets, derailleurs, cranksets, brakes and pedals.

Regular component cleaning prevents premature wear and tear on chain and sprockets, eliminates chain skipping caused by dirt and grunge, and assures smooth operation of drivetrain and brakes.

The Grunge Brush™ can be used dry or for deep cleaning action, use it with Citrus Bike Chain Degreaser or Multi Bike Degreaser, by simply spraying degreaser onto the chain or directly onto bristles. Grunge Brush™ scrubbing action, coupled with a Finish Line bike degreaser, will leave your drivetrain looking like new
