CERAMIC SEMI-METALLIC PADS

Aramid fiber, ceramic fiber, carbon fiber and metal (copper and brass powder) fiber, etc. Soft–mild braking control, controllable pad on first braking with safety. Good initial bite. HH stopping power pad (Ameca test result). Low disc attack. Long life pad.

BRAKE PADS

ENGINE GASKETS

Precision-cut gaskets utilize materials that are engineered to endure the high temperatures and pressures of today's engines.

SINTERED METAL PADS

Pad consists of 50-60% copper combined with carbon, ceramic, tin and abrasives. Pad material is aramid fiber, metals, abrasives and lubricants mixed with Phenol Resin.

Slightly more progressive feel at the lever. Metal powder components exceed 50% of pad material. Excellent initial brake pad bite that is not as aggressive as the RJL compound. Iron backing plate is plated with copper to make it a stronger bond with the pad friction material. Powerful stopping power in wet or dry conditions. Excellent initial pad bite, lower lever effort and minimal pad bed-in time required. Hard brake pad backing plate will not warp, even under extreme use. Superior stopping power with no fade.

INTAKE & EXHAUST VALVES

Precision manufactured from top-quality materials to match OEM valves exactly.

BRAKE SHOES

High friction, 100% non-asbestos material for quicker stops.

HAYNES MANUALS

What sets Haynes Manuals apart is the attention to detail that goes into the production of each book. Every manual is written from hands-on experience based on a complete teardown, which is the step-by-step procedure of dismantling a particular vehicle part-by-part. This is followed by the detailed rebuilding of the specific model it documents. Writing each manual takes 30 man-weeks, with authors working as teams to shorten the production time and avoid fatigue during the difficult process. Hundreds of photographs accompany each manual's step-by-step instructions. The books are written from the actual experience of Haynes' own expert personnel using only a basic set of tools and presented in a style that any DIYer can follow, even a beginner. The DIYer can save a great deal of time and money, not to mention feeling proud of the job, by using a Haynes book..

RATCHETING TIE DOWN WITH WEB CLAMP

Erickson's NEW WEB CLAMP was designed to address the problem of what to do with excess webbing. The WEB CLAMP mechanism is much like a mouse trap, lift the spring loaded clamp and place the folded webbing under the clamp, release the spring loaded WEB CLAMP and you have trapped the excess web. Very simple and effective. SO NEAT!!

CANYON DANCER BAR HARNESS II

- The cross straps are held farther away from the switch gear.
- The "cups" eliminate possible damage to grips.
- The new cups hold the cross straps and your tie downs further out on the bars to better clear a wider variety of fairings.
- The new cup is even easier and quicker to install correctly.
- The cups are sized to fit the fattest grips in the industry
- The steel D-ring "lay-ins" prevent losses even after many years of weather and abuse begin to weaken the Polycarbonate cup.
- We are using heavier thread with more stitches in the pattern for greater strength and the contrasting thread color aids in detecting flaws or damage.

FLASH2PASS™

A GARAGE DOOR OPENER MADE FOR YOUR MOTORCYCLE, ATV OR UTV!

You know your garage door remote. Maybe it's clipped to your visor, or in your purse or your jacket pocket, or under the seat, or in the glove compartment, or stashed away in the console. Maybe it just drove away in the other car.

You know what the battery looks like, too, you replace it every year or so. It's a nine-volt, or is it two AA's? You better check before you buy new ones…

You might even worry about somebody swiping it and using it to get into your house.

We've solved these problems by electronically integrating the activation of your garage door opener remote into the high beam switch of your turn signal lever.

- A double flash of your headlight high beams opens or closes your garage door
- A small one time investment gets you the maintenance free system
- No remote transmitter to get stolen or lost
- No battery to buy or replace…Flash2Pass™ gets its power from your car
- Digital encrypted signal and rolling code technology for ultimate security
- Quick and easy do-it-yourself installation
- Up to six transmitters may operate a single receiver
- Additional receivers may be installed elsewhere and programmed to your Flash2Pass™ equipped vehicle
- Works with virtually any garage door opener manufactured since 1982

The Transmitter is a radio frequency device that is mounted under the hood of the car. It is relatively small, approximately 2" x 2" x ¾" and is attached under the hood with either the enclosed screws, or the plastic zip tie. The wires are attached with Posi-Tap™ connectors to the headlight high beam positive wire and to the ground wire. The Flash2Pass™ transmitter is non-polarized so you can attach either wire to the headlight wires.

The Flash2Pass™ receiver is designed to replace the push button inside your garage. If you have additional functions on your push button that you would like to keep, the receiver can be installed next to your original push button and "piggybacked" to it.

The Flash2Pass™ transmitter and receiver are packaged as a set that is pre-programmed at the factory, or they are available individually. For instance, if you had a two-car garage with one large door for both bays, you would buy one set and an additional transmitter. The additional transmitter would be installed in the second vehicle and the receiver programmed to accept it.

Say you had a vacation home with a garage door opener. You could get an additional Flash2Pass™ receiver for it and then program your car to it. That way, you wouldn't have to remember to bring the remote with you. It will always be at your fingertips…both at home and on vacation.

Now, if you live in a gated community and the community installed the F2P Integrated Control Access System, you would be able to access the community gate, and your individual garage. We call this the "gate to garage" concept. Also if you worked in a place that had some sort of parking control and the F2P ICAS were in place, you again could use your Flash2Pass™ transmitter to gain access, assuming you were authorized and/or programmed into the receiver.

SPORTECH CLASSIC SERIES WINDSCREEN

STAND OUT FROM THE CROWD

It's all about passion. Your bike is a living, breathing extension of your individual personality. You're extremely passionate about your bike. From it's low-slung, air-slicing front end to it's knife-like tail-section. The way your stomach gets slammed into your back pockets when you whack the throttle, and that rush you feel as the front wheel jumps off the pavement with each shift.

We don't want your bike to get lost in the crowd any more than you do. Today's sport bikes are simply amazing in terms of shear performance, handling and cutting-edge styling. We build this passion into every windscreen we design and our focus is to reflect that level of styling and performance. These are the most technologically advanced windscreens available, utilizing premium acrylic materials treated with our proprietary metallizing process which produces a brilliant yet durable chrome finish. These dazzling, tough-as-nails windscreens will definitely make a statement.

CLASSIC CHROME

This is the original chrome sport bike windscreen! These windscreens offer OE profile and fit, with a deep, rich opaque show-chrome appearance. Manufactured from premium, extruded .125" acrylic, these windscreens are then treated with our proprietary metallization process which produces a brilliant yet extremely durable mirrored finish

STANDARD BLACK VINYL CABLES

BV THROTTLE • BV THROTTLE PULL • BV THROTTLE PUSH • CHOKE • FRONT BRAKE

Our standard replacement black vinyl cables meet or exceed O.E. quality. Black Vinyl cables feature a rolled tempered-steel wire housing made to exact inner and outer specifications to insure correct clearances for the inner wire. All cables have an inner nylon sleeve for longer life and smooth operation. Motion Pro® uses the terminology "coil wound" (CW) to describe the standard type of cable housing.

FOOTNOTES (FN)

079
For use with stock throttle bodies/carburetors and Revolver throttle assembly only. IMPORTANT - The Revolver VR throttle does not have the starter and kill switch wiring or switches that are built into your stock throttle assembly. Use of the Revolver VR Throttle requires an aftermarket kill switch and starter button assembly (pn 11-0098) not included in kit. Revolver Kits have cables specifically designed for fitment on specific models, but the Revolver throttle itself is not model specific. Therefore, in some situations, the Revolver kit may not be a direct bolt on installation due to space limitations on the stock handlebar. In some installations, it may be necessary to move other control components on the stock handlebar, shorten the Revolver throttle tube and grip, install longer aftermarket handlebars, or possibly all of the above. It is up to the end user to determine the best method for fitment on their motorcycle, and ensure that the Revolver kit is installed properly and with the correct clearances for safe operation. Installation should be done by a qualified mechanic and carefully checked for proper function. Warning: Improper installation could result in great bodily injury or death.

088

For use with stock throttle bodies/carburetors and Revolver throttle assembly only. IMPORTANT - The Revolver VR throttle does not have the starter and kill switch wiring or switches that are built into your stock throttle assembly. Use of the Revolver VR Throttle requires an aftermarket kill switch and starter button assembly (pn 11-0098) not included in kit. Revolver Kits have cables specifically designed for fitment on specific models, but the Revolver throttle itself is not model specific. Therefore, in some situations, the Revolver kit may not be a direct bolt on installation due to space limitations on the stock handlebar. In some installations, it may be necessary to move other control components on the stock handlebar, shorten the Revolver throttle tube and grip, install longer aftermarket handlebars, or possibly all of the above. It is up to the end user to determine the best method for fitment on their motorcycle, and ensure that the Revolver kit is installed properly and with the correct clearances for safe operation. Installation should be done by a qualified mechanic and carefully checked for proper function. Warning: Improper installation could result in great bodily injury or death.

For use with stock throttle bodies. Stock reel is 33.4 mm. IMPORTANT - The stock twist throttle assembly on this model incorporates an on/off switch, mode switch, and starter button. The Motion Pro 11-0098 accessory switch only has an on/off switch and starter button, and cannot be used to replace the original switching functions on the stock throttle assembly. In order to install the Revolver VR kit and retain all the necessary switching functions, owners of this model will need to install longer aftermarket handlebars (at least 50 mm longer than stock on the right side) and use the stock throttle assembly mounted behind the Revolver VR throttle housing. The stock twist throttle assembly can be modified to remove the throttle reel holder portion and leave just the necessary switches. This modification makes it narrower and uses less space on the handlebar. Revolver Kits have cables specifically designed for fitment on specific models, but the Revolver throttle itself is not model specific. Therefore, in some situations, the Revolver kit may not be a direct bolt on installation due to space limitations on the stock handlebar. REV2 THROTTLE KITS

How the Rev2™ Throttle Works

The Rev2™ throttle has several different size reels that will change how much twist is necessary for the throttle to completely open the carbs or throttle bodies on a motorcycle. The larger the reel is, the shorter the twist. Each reel size will shorten the twist by about 10 degrees. If your stock throttle has a 40mm reel and stock twist is 90 degrees (1/4 turn), the 45mm reel will reduce the twist to 80 degrees and the 50mm reel will reduce it to 70 degrees. The 35mm reel will increase the throttle twist to approximately 100 degrees. This is just an example; every model of motorcycle is different.

The included cam reel has a progressive profile that allows the throttle to act like a sensitive, long twist throttle during the initial small throttle openings for precise control and then acts like a more aggressive short twist throttle at large throttle openings, progressively shortening the amount of twist needed to reach full throttle.

The most advanced variable rate throttle in the world

- The second generation of our innovative reel changing system lets you tailor the throttle rate to riding conditions and rider preference
- New ultra compact housing with snap-together elbows make it easy to install and change reels
- Sleek new design requires less handlebar space for lever clearance and throttle position
- Use smaller reels for slower throttle rate and larger reels for faster throttle rate
- Included cam reel provides progressive throttle response preferred by some riders
- Unique reel design allows fast reel changes
- Cable boot keeps dirt and dust out for reliable and smooth operation
- Billet aluminum in-line cable adjusters for easy installation and adjustment
- Lower section of cables use 5 mm housing with PTFE liner for reduced friction, increased routing flexibility and lighter weight
- Upper section of cables use 6 mm housing to provide solid support of adjusters
- Simple to install and maintain
- Designed by Motion Pro
- Patent pending

For use with stock throttle bodies/carburetors and Rev2 throttle assembly only. IMPORTANT - The Rev2 throttle does not have the starter and kill switch wiring or switches that are built into your stock throttle assembly. Use of the Rev2 Throttle requires an after market kill switch and starter button assembly (pn 11-0098) not included in kit. Rev2 Kits have cables specifically designed for fitment on specific models, but the Rev2 throttle itself is not model specific. Therefore, in some situations, the Rev2 kit may not be a direct bolt on installation due to space limitations on the stock handlebar. In some installations, it may be necessary to move other control components on the stock handlebar, shorten the Rev2 throttle tube and grip, install longer after market handlebars, or possibly all of the above. It is up to the end user to determine the best method for fitment on their motorcycle, and ensure that the Rev2 kit is installed properly and with the correct clearances for safe operation. Installation should be done by a qualified mechanic and carefully checked for proper function. Warning: Improper installation could result in great bodily injury or death.

YUASA BATTERIES

Not all snowmobiles have an electric start, but if you are lucky enough to own a model that does, you know one thing: you want it to start when you push that button. And so does the manufacturer. That is why they choose Yuasa. Some of Yuasa's most heavy-duty batteries live under the hoods of some of the biggest and fastest snow machines in the country. MAINTENANCE FREE

Absorbed Glass Mat (AGM) Technology is an advanced battery design used in Yuasa's Maintenance Free Batteries that eliminates water loss. Once it's filled with acid the battery is permanently sealed - so you'll never need to fill it with water or check the acid level.

Long Life
Because of its lead calcium design, the AGM battery will hold its specific gravity more than three times longer than conventional lead antimony types. This means much longer periods between charges when the battery is used in a standby mode, like winter storage.
And to remain factory-fresh the AGM battery is shipped dry along with its own pack of high-gravity acid that's added at the time of installation.

Sealed, Non-spillable
Once filled with acid from its special packs, the AGM battery is virtually maintenance free. It's totally sealed and all of the acid is absorbed in the special plates and separators, so there is no need to worry about acid leaks on valuable vehicle parts and accessories.

Selected types also available in Factory Activated (filled, sealed and charged at the factory).

YUMICRON CX

The YuMicron CX was the first small engine starting battery to use "lead calcium" technology. This special technology means the YuMicron CX generates more power, requires less maintenance, and lasts longer than any other conventional battery.

More Power
Because of its unique design, the CX will generate 5% to 8% more cold cranking amperage than our own high-output YuMicron lead-antimony battery. For high compression machines, this means greater reserve capacity and more starting power.

Less Maintenance
The YuMicron CX lead calcium technology also reduces water loss, so the CX requires servicing (water filling) only about one-eighth as often as ordinary lead-antimony types.

Longer Life
The YuMicron CX holds its specific gravity more than three times as long as lead-antimony type batteries resulting in a longer shelf life. This feature means longer periods between charges, especially during winter months.

Yuasa Yumicron/Yumicron CX Batteries are shipped dry with no acid. To order acid for your battery first check the acid volume needed on the Battery Specification Chart then order part # SO-ACID for every 21 oz. needed.

POWER SONIC BATTERIES

Tough. Reliable. Whether you ride daily, seasonally, or just on weekends, you'll get more enjoyment out of your motorcycle, ATV, PWC or snowmobile with a Power Sonic battery. Our batteries perform reliably during off-road, over water and cold weather use, and keep their charge even after months of storage. Available in traditional flooded or the new sealed AGH designs, Power Sonic batteries are built to withstand punishing vibration, salt spray, gas and oil, and protect against equipment-damaging spills, corrosion and seepage. And because nothing ruins a weekend faster than a dead battery, we use advanced designs and manufacturing techniques to shorten current paths and reduce resistance, giving you higher cranking power and maximum battery life.

MAINTENANCE FREE HIGH PERFORMANCE

SEALED MAINTENANCE FREE

Once these batteries are put into service, they become a completely sealed unit requiring a lot less maintenance than Conventional Batteries. Although the battery still needs to be charged on a regular basis if your vehicle is not in use, there is no need to monitor the fluid level in this battery type. Unlike the Conventional Battery, once this type battery is sealed, it becomes spill proof, which can eliminate damage from battery acid that can occur from using a flooded battery.

FACTORY ACTIVATED MAINTENANCE FREE

The same convenience and technology as the Sealed Maintenance Free Batteries mentioned above, except this battery is sealed and activated at the time of manufacture. Very convenient to the point that all that needs to be done is put the battery into your vehicle and you are ready to ride. The only downside of this type of battery is that all batteries once activated have a shelf life, and if this battery is not going to be used right away, or be put in a vehicle that is not going to ridden on a regular basis, the battery will need to be kept charged on a battery maintainer.

CONVENTIONAL

This type of batteries has flooded electrolyte and is very accessible. These batteries have to be carefully and periodically maintained. The conventional batteries are normally less expensive than the other types mentioned, but with the cost savings come more maintenance. You will need to add distilled water from time to time to prevent the battery from sulfating. Water loss is a normal characteristic of this type of battery because of the high temperature inside, and the process of electrolysis and evaporation. This means the fluid level of the battery needs to be checked on a regular basis. Conventional batteries also tend to discharge more rapidly than AGM type batteries.

Battery Tender Lithium Battery FAQs:

What is the difference between Lithium Ion batteries and Lithium Ion Phosphate batteries?
Lithium-ion batteries are rechargeable batteries that use lithium as one of their active components. Lithium Ion Phosphate Batteries are a type of lithium-ion batteries known for their long life and inherent safety.

How does the “Lead Acid Equivalent” capacity rating compare to Flooded, AGM, and Gel cell battery ratings?
The capacity of lead acid batteries decreases markedly when discharged at high currents such as when starting a vehicle. This effect is much less for a lithium battery. In fact, when discharged at a current equal to its capacity, a 2 A-hour lithium ion phosphate battery will have as much capacity as a 9 A-hour lead acid battery.

Can I use a standard Lead Acid charger/maintainer for my Battery Tender® lithium battery?
As long as the battery charger does not have a desulfation mode and the peak voltage does not exceed 14.8V during the charge cycle it can be used to charge a Battery Tender® Lithium Battery. Of course the best way to charge and maintain a Battery Tender® Lithium Battery is to use a Battery Tender® Lithium Battery Charger.

What is the best way to store my battery long term?
A Battery Tender® Lithium Battery has virtually no self-discharge and has a shelf life of 2 years. The best way to store the battery is disconnected from the vehicle in a clean and dry location with the protective covers installed on the positive terminals.

How do I prevent water damage or corrosion to my battery?
A Battery Tender® Lithium Battery has a waterproof construction however the battery should be kept clean to minimize corrosion. A corrosion inhibitor can also be used on the terminal and connections.

How do Lithium batteries Cold Cranking Amps “CCA” rating compare to Lead Acid batteries?
When talking about lithium batteries used for engine starting the term CCA is used when making comparisons of the cranking ability to that of a lead acid battery in the same application. It is important to select a Battery Tender® Lithium Battery that has a CCA rating that is equal or greater than the lead acid battery it is replacing.

What happens if I hook up my battery charger to the wrong terminals?
If you happen to hook up your battery charger cables in reverse (positive cable to negative terminal and negative cable to positive terminal) then you will potentially damage the battery.

What happens if I hook up my battery to the wrong terminals on my vehicle?
If you incorrectly connect your battery to the wrong cables (positive cable to negative terminal and negative cable to positive terminal) then there is a chance for spark and damage to the battery

SOLAR BATTERY CHARGERS + MAINTAINERS

BATTERY LIFE+

BRING LIFE TO YOUR BATTERIES
WITH THE POWER OF THE SUN

Solar panels are comprised of photovoltaic cells ("photo" meaning light, "voltaic" meaning electricity) that convert sunlight into power. The sun gives off enormous amounts of energy in the form of heat and light, which is captured by the cells. In turn, the power from the light essentially loosens electrons from the cells in order to create a flow of energy. This energy is then directed to either a storage unit (such as a battery) or through a regulator (such as our FLEX line) directly to a device. This allows you to generate energy wherever you go, as long as the sun is shining.

BATTERY LIFE+ SOLAR 5

5 Watt Solar Battery Charger

PART #		
650282	63.95	B

Keeps 12-volt lead-acid batteries fully charged and maintained through solar power and provides up to 180mA (for the 2.5 Watt) / 410mA (for the 5 Watt) charging current to counteract parasitic drain of most vehicles, such as cars, boats, trucks, motorcycles, ATVs, RVs, lawn mowers, and more. Safely charges wet cell, gel cell, AGM, enhanced flooded battery or any maintenance-free battery. Built-in safety protection for short-circuit, open-circuit, and over-current. Its ultra-low profile design makes it simple and easy to install, and completely weatherproof for outdoor use (rated at IP65). Integrated LED indicator illuminates when generating power. Thin film technology for performance in low-light, cloudy and overcast conditions.

HIGH TORQUE STARTERS

1.4 KW

This is a great stock replacement unit and is covered by the industry's best limited lifetime warranty. The 1.4kW design works well in larger CI engines with compression releases.

1.7 KW

A drop in solution for modified FL series engines. Due to the space constraints of FL series bikes our hi-output compact OSGR motor requires no modifications for installation. This starter utilizes a permanent-magnet motor design that is no larger than the stock 1.2kW starter. Due to the high in-rush currents of permanent magnet motors this is not a good solution for a "bar hop" bike due to the limited capacity of the charging system.
WE RECOMMEND USING 4GA BATTERY CABLES AND A 300 CCA AGM BATTERY WITH THIS STARTER.

CDI BOXES • IGNITION COILS • TRIGGER COILS

Rick's Motorsport Electrics offers a full line of charging and starting systems & electrical ignition components for Asian and European street bikes, ATV/Off Road, snow mobiles, and watercraft. The company goal is to provide a high quality, cost effective alternative to an OE piece. They provide direct plug-in, bolt on pieces whenever possible. But they also know the value of the occasional universal part to fit an obscure machine. Rick's Motorsport Electrics also offers a one year replacement warranty on all of their pieces, excluding CDI boxes.

RICK'S CHARGING COMPONENTS

All of Rick's charging components are brand new parts and come with a one year replacement warranty. Most units are direct replacement pieces and come with the factory plug ends. This allows for an easy install – just unplug your part and plug ours in. We also know there is a need for universal rectifier regulators for certain unique machines. In this case, the rectifier regulator will come with wire leads only and you will need to hard wire it. Before replacing your rectifier regulator, be sure to read the instructions & check the integrity of all your electrical connectors.

STATORS & RECTIFIERS/REGULATORS CDI/ECU & POWERJET

Street bikes use a full DC electrical system almost exclusively. The charging system is made up of a stator, regulator/rectifier, and battery.

Motorcycles with batteries must convert the AC power from the stator into DC. In order to do this, the power coming from the stator must be converted by a regulator/rectifier. The rectifier actually converts the power from AC to DC, while the regulator keeps the power level (voltage) from going above the 13.8 -14.5 volts needed to power a standard 12 volt battery. It is important that the stator provides more power than needed by the motorcycle so that the battery will stay charged. If the motorcycle uses more power than the stator can provide, the battery will start to drain. This will typically happen if the voltage drops below 13 volts.

RECTIFIER/REGULATOR

ElectroSport regulator/rectifiers are designed to be direct replacements to original equipment by using stock mounting locations and OEM style connectors. These parts are designed to handle higher power loads than their OEM counterparts and are recommended when upgrading a stator to a high-powered alternative. Our regulator/rectifiers are a cost effective solution to a blown OEM part and are engineered to prevent these problems from arising again.

PLUG-IN STATOR

We strive to build stators that last and exceed our customers' expectations. We often include upgraded features on our performance stators. Changing winding specifications, wire size, and the number of poles that the magnet wire is wrapped around are only a few of the tricks up our sleeve for bringing the most advanced power generation to motorsports. Almost all of our stators provide a substantial power gain within the engine rpm ranges that it is needed most.

3-PHASE HEAVY DUTY STATOR

This heavy duty stator can be used as a higher output replacement for the OE stator. Output is about 20% more than the OE stator provides. This new stator is built with the highest grade lamination materials and the copper windings are triple insulated for maximum reliability. To ease installation we supply it with new connectors and wire sleeving. It is a very cost-effective replacement unit for when the OE stator failed, and it comes with a full one year warranty.

POWERJET FUEL CONTROLLER

The PowerJet is a simple yet complicated device. It measures the outside air temperature very close to where the stock sensor is located, and adjusts the signal from the OEM air temperature sensor to the ECU to make use of the built in Air Temperature Correction factor that is built into every stock ECU.

What this accomplishes is that the ECU is told that the intake air is a little cooler than it is, and the ECU will respond by injecting a fraction more fuel depending on the PowerJet setting. The rider will notice a substantially improved engine response when you twist the throttle. The neat thing is that when under constant load (constant speed) the oxygen sensor in the exhaust will make the ECU correct the fuel/air ratio back to stock! However, as soon as the system notices an increase in power it switches from closed loop (oxygen sensor feedback) back to open loop (no feedback) and will correct the fuel/air ratio by the amount you selected on the PowerJet. It can be easily installed by plugging it in between the stock AIT sensor which is usually located somewhere on the airbox and the bike's wiring harness. Each PowerJet comes with the exact plug in connectors and installation will normally only take a few minutes. Finding the air temperature sensor usually takes more time than plugging in the PowerJet.

WISECO FUEL CONTROLLERS

To get the most out of upgrades like high compression pistons, performance camshafts, exhausts or another power adding components, adjusting the amount of fuel being delivered is a logical next step. Much like re-jetting or adjusting the pilot, needle, and main jet circuit in a carburetor, Wiseco's 3.5 Fuel Management Controllers can really enhance the performance of aftermarket parts. Wiseco's new Generation 3.5 Fuel Management Controllers for EFI tuning are extremely simple and easy to use and better yet they require no dyno, complex hookups, power supplies, or extra wiring harnesses! With the push of a button, you can easily adjust fuel delivery by adding/subtracting fuel from each zone to work in conjunction with your latest modifications. The display lights on the controller will display the injector pulse duration, which provides instant feedback for where to make the tuning adjustments. Simply plug the included connector into the existing factory wiring harnesses, mount the controller for easy access, and make the adjustments without ever leaving the seat of your bike/ATV. It doesn't get any easier than this to dial in your new EFI engine.

PIAA BULBS

PIAA POWERSPORTS

GREATER PERFORMANCE: PIAA bulbs are engineered with XTRA Technology for greater performance per watt than any other bulb on the road. (XTRA is a term coined by PIAA to designate a high-efficiency bulb that is designed to produce greater light output than its rated power consumption, i.e. 55W = 85W of light output.) Greatly enhance your ability to see and be seen. A metal bond holds the heat-resistant glass tube securely to prevent cracks and leaks. A welded focus ring and one-piece filament support assures proper positioning.

BRILLIANT COLOR: Beam color affects visibility and eye strain over long periods. The brilliant white/blue light allows comfortable night driving over extended periods of time. PIAA bulbs are both a performance upgrade and an aesthetic enhancement. You will see the difference even in the daytime.

WARRANTY AND SUPPORT: PIAA is so confident in the durability and reliability of our products that we offer a no questions asked, replacement of any halogen bulb that fails within one year of purchase.

PIAA H4 EXTREME WHITE PLUS BULB

PIAA STANDARD HALOGEN BULB

Super Plasma GT-X

The Super Plasma GT-X bulbs offer an unmatched combination of fashion and performance with a bluish-purple color very similar to H.I.D. and the closest yet to sunlight.

Xtreme White / Xtreme White Plus

The Xtreme White Series of bulbs have a cool white light output that gives the driver better color recognition on depth perception and better contrast. The blue top coat adds a slight blue tint to a lamp with no loss of performance.

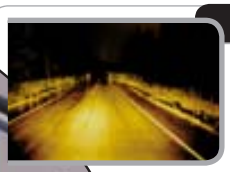
Intense White

The Intense White bulbs produce a radiant white beam and provide the best possible balance between performance and bulb life.

Star White

Star White bulbs are significantly whiter and brighter than stock halogen and will increase bulb performance without taxing your vehicle's electrical system.

Ion Crystal / Plasma Ion Yellow



Ion Crystal coating transforms white light into amber light without diminishing the strength of the beam. Ion Crystal technology allows as much as 95% of the light produced by the bulb to pass through, compared to as little as 65% through dyed glass. The long wavelength Plasma Ion beam reduces refraction for dramatically increased visibility in snow, rain and fog.

PIAA LAMPS

DRIVING BEAM PATTERN

Driving lamps are designed to increase the range and brightness of your vehicle's high beam. All driving lamps are extremely bright and must be used with caution.

ATP ALL-TERRAIN BEAM PATTERN

PIAA engineers addressed the needs of ATV riders by creating the ATP All-Terrain Beam Pattern, that gives the ultimate combination of spread, height and distance for use on ATVs.

7/8" - 1.25" Black Twin Pack

820028	**45.50**	G

Our single clamp system with infinite adjustability, redefines universal! The new 360 x 4 Universal Bracket is named for the fact that the light mounting base can be rotated 360˚ and fits 4 different bar sizes. Mount lights to any bar from 7/8 inch utility ATV bars to a 1-1/4 inch motorcycle engine guard. Can also be used for 1" or 1-1/8" handle bars. Simply slip in 1 of the 3 inserts provided and you have the size you need. With 360˚ adjustability you can mount lights onto just about any angle bar on whatever vehicle you own. Machined from solid billet aluminum for strength and powder-coated for rugged wear and long life.

PIAA POWERSPORTS

EXTENSION HARNESS

Larger ATVs and Side x Sides are requiring a longer light harness than normal. The 80" extension was designed for mounting lights on the factory brush guard of a Yamaha Rhino, and the 130" extension was designed for use when mounting on the overhead bars.

These harnesses are equipped with bullet style connectors for quick plug-in installation.

HALOGEN HEADLAMP BULBS

ARCTIC CAT | POLARIS | SKI DOO | YAMAHA

ALL WEATHER
(AW) These bulbs are designed for rain, fog and snow and are just as bright as standard halogens. The all weather dichroic coating keeps the glare down from the elements.

ALL WEATHER BLUE
(AWB) Same advantages as the all weather, plus the blue coating is more noticeable to oncoming traffic. Note: The coating does decrease the light output slightly.

GOLD
(G) The biggest advantage is its ability to be seen by oncoming traffic.

XENON BOOSTED
(XPB) Best performing lamp on clear nights, the xenon gas increases the light output to compensate for the special vycor blue coating. These combinations bring the light as close to daylight as possible.

FORGED POWERSPORTS PISTONS

Powersports Forged Piston Advantage

Wiseco leads the performance aftermarket by producing the highest quality forged pistons for Dirt Bikes, ATV's, Snowmobiles, Outboard Marine, and Motorcycles right here in the USA. Wiseco is unique because we forge all of our own pistons in house, and produce all of our own forge tooling right here in the USA. This allows us to control all aspects of our manufacturing process from raw bar to skirt coating finished parts.

In addition, in-house dyno testing gives Wiseco the ability to develop state-of-the-art technology such as new shapes, coatings, and components, and lead the industry through rigorous R&D. Linking all segments of Wiseco's organization through design, testing, manufacturing, and distribution allows us to fulfill market needs with minimum lead-times.

Piston Engineering / ArmorGlide Coating

Wiseco ArmorGlide™

Some of our forged pistons offer our new ArmorGlide™ skirt coating, which is the result of testing, development, and benchmarking through Wiseco's rigorous in-house dyno program. The outcome is the ultimate in skirt coating toughness, lubrication, and bond technology working together to minimize friction, maximize horsepower, and provide improved wear resistance. Not only is ArmorGlide™ a high-tech lubricant that reduces friction, but it also allows the piston to be fitted tighter within the bore allowing a better ring seal and reduced noise from piston rock.

Top End Piston Kits

Wiseco's complete top end Piston Kits are offered for nearly every popular application in the powersports market. These kits contain everything you need to complete your rebuild the right way, the first time. High quality parts specifically chosen by us to match our forged pistons are included in this kit for easy one stop shopping.

- 4-stroke kits feature a 'race-ready' dome finish with smooth edges for improved combustion flow. Horizontal slot-pin oiling reduces friction and provides scuff resistance, along with a pressure seal groove for maximum ring seal.
- Most PK/SK/WK/VT kits from Wiseco feature a complete top end gasket kit that gives you everything you need to complete your rebuild from premium materials.
- 4-stroke race applications feature Wiseco's ArmorGlide™ skirt coating to provide reduced friction and noise to contribute to increased horsepower.
- Dedicated forgings used for superior strength to weight ratio utilizing aerospace alloy.
- High Performance ring kit and alloy pin included with each piston kit for extended life and sustained power.

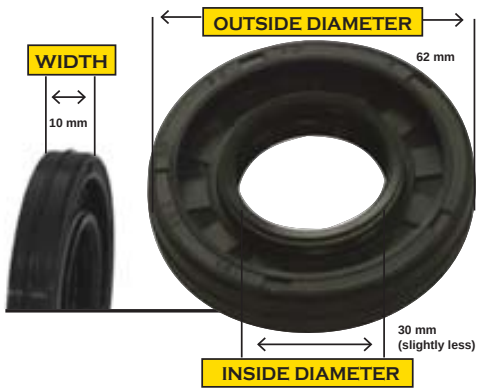
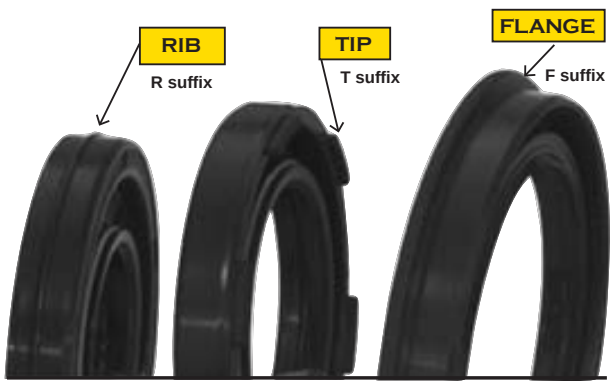
METRIC DIMENSION EXPLANATION
30 x 62 x 10 R

- 30 = denotes 30 millimeter Inside Seal Dimension (measure shaft for exact dimension)
- 62 = denotes 62 millimeter Outside Seal Dimension
- 10 = denotes 10 millimeter Seal Width
- R = denotes external rib on seal
- Note: Manufacturers imprint size on most metric seals.





PERFORMANCE OIL SEALS BY METRIC SIZE

A "T" at the end of the part number indicates a Teflon seal - Teflon seals are slightly higher in price, but far superior for todays high powered, demanding engines.

BIG GUN EXHAUST SYSTEMS

EVO STREET SERIES

The Big Gun EVO Street Series was designed to deliver maximum horsepower & torque gains throughout the RPM range. Made from .049 stainless steel tubing & an aluminum muffler canister, the EVO "S" exhaust system is much lighter than stock units. Our sleek muffler design allows for maximum clearance and ease of installation. The muffler is coated black and wrapped in our high temp EVO "S" decal, then coupled with our aggressive black end tip to give it that signature Big Gun look. All Big Gun exhausts are for closed course use only and are not intended for use on the road. Big Gun exhausts are NOT LEGAL for sale or use on pollution controlled vehicles in the state of California.

K&L AIR CUT OFF VALVE SETS

Here's an inexpensive alternative to the costly OEM assembly. To prevent "afterburn" generated by a lean fuel mixture when closing the throttle, the air cut-off valve temporarily closes the slow-jet air passage, creating an instantly richer mixture. Included in these high quality kits are all parts necessary for a complete rebuild (diaphragm, spring and o-ring). Made in Japan.

The Jet Needle controls the fuel mixture in the mid-range 1/4-3/4 throttle position. The taper of the needle determines the amount of the fuel. For example: the thinner the diameter of the needle, the more fuel will be drawn. The thicker the diameter of the needle, the less fuel can be drawn.

CARBURETOR PARTS & ACCESSORIES

MIKUNI NEEDLE JET • PRIMARY TYPE

The needle jet is the main fuel passage to the main bore of the Mikuni carburetor. Depending on the inside diameter of a specific needle jet, this will also affect the function of the needle. Therefore, needle jets and needles act together as the main system in controlling the amount and mixture of the fuel which is drawn in mid-range 1/4-3/4 throttle operation.

CARBURETOR PARTS & ACCESSORIES

MIKUNI NEEDLE JET • BLEEDER TYPE

The needle jet is the main fuel passage to the main bore of the Mikuni carburetor. Depending on the inside diameter of a specific needle jet, this will also affect the function of the needle. Therefore, needle jets and needles act together as the main system in controlling the amount and mixture of the fuel which is drawn in mid-range 1/4-3/4 throttle operation.
