PULL STARTER LEAK SHIELD

The Honda Pull Starter Leak Shield by High Lifter shields your engine from water and mud. If you ride a Honda ATV, then you are at risk. After a period of time and only moderate use, many Honda owners experience oil and smoke from the exhaust and/or loss of power. This can lead to hefty rebuilding costs, not to mention lost time on your ATV.

Kit Contains: Lexan shield (stronger than plexi glass), one gasket, one recoil adapter and mounting hardware.

HALOGEN HEADLAMP BULBS

ARCTIC CAT | POLARIS | SKI DOO | YAMAHA - SEE APPLICATION GUIDE ON OPPOSITE PAGE

ALL WEATHER
(AW) These bulbs are designed for rain, fog and snow and are just as bright as standard halogens. The all weather dichroic coating keeps the glare down from the elements.

ALL WEATHER BLUE
(AWB) Same advantages as the all weather, plus the blue coating is more noticeable to oncoming traffic. Note: The coating does decrease the light output slightly.

GOLD
(G) The biggest advantage is its ability to be seen by oncoming traffic.

XENON BOOSTED
(XPB) Best performing lamp on clear nights, the xenon gas increases the light output to compensate for the special vycor blue coating. These combinations bring the light as close to daylight as possible.

PIAA BULBS

PIAA POWERSPORTS

GREATER PERFORMANCE: PIAA bulbs are engineered with XTRA Technology for greater performance per watt than any other bulb on the road. (XTRA is a term coined by PIAA to designate a high-efficiency bulb that is designed to produce greater light output than its rated power consumption, i.e. 55W = 85W of light output.) Greatly enhance your ability to see and be seen. A metal bond holds the heat-resistant glass tube securely to prevent cracks and leaks. A welded focus ring and one-piece filament support assures proper positioning.

BRILLIANT COLOR: Beam color affects visibility and eye strain over long periods. The brilliant white/blue light allows comfortable night driving over extended periods of time. PIAA bulbs are both a performance upgrade and an aesthetic enhancement. You will see the difference even in the daytime.

WARRANTY AND SUPPORT: PIAA is so confident in the durability and reliability of our products that we offer a no questions asked, replacement of any halogen bulb that fails within one year of purchase.

PIAA H4 EXTREME WHITE PLUS BULB

PIAA STANDARD HALOGEN BULB

Super Plasma GT-X

The Super Plasma GT-X bulbs offer an unmatched combination of fashion and performance with a bluish-purple color very similar to H.I.D. and the closest yet to sunlight.

Xtreme White / Xtreme White Plus

The Xtreme White Series of bulbs have a cool white light output that gives the driver better color recognition on depth perception and better contrast. The blue top coat adds a slight blue tint to a lamp with no loss of performance.

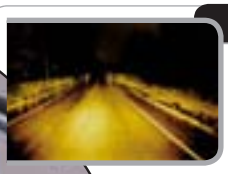
Intense White

The Intense White bulbs produce a radiant white beam and provide the best possible balance between performance and bulb life.

Star White

Star White bulbs are significantly whiter and brighter than stock halogen and will increase bulb performance without taxing your vehicle's electrical system.

Ion Crystal / Plasma Ion Yellow



Ion Crystal coating transforms white light into amber light without diminishing the strength of the beam. Ion Crystal technology allows as much as 95% of the light produced by the bulb to pass through, compared to as little as 65% through dyed glass. The long wavelength Plasma Ion beam reduces refraction for dramatically increased visibility in snow, rain and fog.

Standard Halogen

Wiseco Performance Products

WISECO CLUTCH COMPONENTS

CLUTCH BASKETS, INNER HUBS, & PRESSURE PLATES

FORGED CLUTCH ADVANTAGE

Wiseco leads the clutch aftermarket with high performance FORGED clutch baskets, inner hubs, and pressure plates. OEM clutch components are made from inexpensive die-castings that quickly wear out and become easily notched. Wiseco offers the only forged clutch components in the aftermarket for off-bike and ATV applications. The feature aligned grain flow in the aluminum adds strength and toughness to the parts that are unparalleled through other manufacturing processes.

Each Wiseco clutch basket, inner hub, and pressure plate start as dedicated forgings built specifically to take advantage of features that can only be made through the precision forging process. Variable fillet blends and complex surfaces can be forged into the part that would otherwise be extremely difficult to produce. The raw forgings are then precision machined to very close tolerances, producing the same high quality parts as Wiseco pistons.

The finished parts are hard coat anodized and Teflon coated to offer superb wear resistance, and a long life of smooth clutch operation. Every new clutch basket is supplied with new components used during assembly, including new fasteners with pre-applied thread locker.

FEATURES & BENEFITS

- Built on dedicated precision forgings
- Made from Aerospace grade aluminum alloy
- Hard coat anodized

GATES ATV/UTV G-FORCE DRIVE BELTS

Continuous Evolution in CVT Belt Technology.

Gates new G-Force™ belts are the first of a new generation of Continuously Variable Transmission (CVT) belts. Building upon 100 years of manufacturing and materials success, Gates has brought this technology to both the Original Equipment Manufacturer (OEM) and aftermarket CVT belt markets. G-Force drive belts are designed for superior fit, performance and durability for today's recreational and utility all-terrain equipment, and are constructed with double or single cog designs to match the OEM belt. Extreme real-world testing has proven the G-Force belt to be high performing and durable, with no clutching adjustments necessary at installation. Whether trail riding, farming, ranching or extreme riding, G-Force belts are engineered for demanding off-road conditions. Just drop in a G-Force belt and be on your way for work or play.

Carbon Cord belts are engineered for drop-in performance utilizing the strongest material on earth for tensile cord. Combined with a specially formulated adhesion gum, edge cord pullout is virtually non-existent.

- Carbon Tensile Cord ensures the belt maintains its designed length and geometry
- Superior resistance to edge cord pull out
- Unique attributes of the Carbon cord decreases the chance of edge cord pull out
- Less likely to damage clutches during belt failure
- Enhanced long term performance
- Improved durability over G-Force Aramid
- Minimal to no stretch under load creates optimal power transmission
- Improved response during acceleration
- Consistent shift characteristics over time and through complete shift ratio
- Un-paralleled response during high load acceleration

HIGHLIFTER OUTLAW DHT AXLES

Setting the Outlaw DHT Axle apart from after-market competitors is the dual heat treated technology. The two most critical areas of an axle that can break are the cage and housing. To combat this problem, those two areas are the target of the dual heat treatment process producing an axle that is tough, resistant to wear, and has an extended life.

HIGHLIFTER AXLE BAR LIFT KITS

The High Lifter Axle Bar Kit replaces OEM axle bars which bind up with a lift kit installed. This kit only replaces the axle bars - riders will reuse factory axle cups and boots. After installation, you can add your Signature Series High Lifter Lift Kit and hit the trails with ease of mind.

The kit includes 2 new OEM grade custom length front axle bars and 8 new CV boot bands.

Note: A special, heavy duty banding tool is required for installation of the 3/8" wide bands included with this kit. **This kit only replaces the axle bars; these are not complete axles**. You must reuse your factory axle cups and boots Check your CV joints and all components for wear or damage and to make sure you have the proper amount of grease in the cup before re-installing the bar.

O-RING CHAIN

- OR chains of the latest generation characterized by new and better performing round section O-rings.
- Light and strong, these sealed chains are engineered to meet the demands of each motorcycle application, providing long life in all conditions seen by road or off-road riders.
- Features include high carbon alloy pins, solid bushings, shot-peened plates and rollers.
- All O-ring chains are submitted to performance enhancing pre-stretching.
- "Gold" outer plates.
- The O-ring series chains provide a huge improvement in wear against standard type chains.
- All chains undergo pre-loading to increase fatigue and wear resistance.

Z-RING CHAIN

The new, high-performance, outstanding ZR chains take a big step forward with the new patented Z44 seal rings. These new generation seal rings, which feature a special-designed conical shape on their inner side, are the result of the evolution of previous X-ring and Z-ring designs.

Features of this design are:
- Patented “Z” ring section.
- The Z-ring flexes when assembled, creating a spring effect that guarantees the seal will not diminish over time.
- The lubricant trapped between the plates and the lobes of the Z-ring keeps the ring lubricated and increases its life.
- ZR chains are the best choice for the most severe and demanding applications. Among other characteristics, the ZR chains feature high alloy steel plates and pins, solid bushings and rollers, shot-peening of plates, pins and rollers, performance-enhancing pre-stretching and “gold” outer plates.

- **Connecting Link Reference** - SL: Spring/Clip Link, RL: Rivet Link, DL: Dual Link (contains both link types)
- **Pin Riveting** - Pressed four times for an extra strong rivet that resists powerful lateral forces on the outer plate
- **Solid Bush** - Solid bushes provide enhanced resistance to distortion from repetitive shock loading
- **Riveted Bush** - All 520 HDR/HDS/X1R/X1R2 have riveted bushes that resist powerful lateral forces on the inner plate
- X-**Ring Seal** - X-Ring seals offer better sealing than the conventional O-Ring and produce far less friction. All sealed JT chains are equipped with X-Rings

ZERO STRETCH TECHNOLOGY

ZST ZERO STRETCH TECHNOLOGY

EK Chain's new Zero Stretch Technology virtually eliminates measurable chain stretch in the first 1000km of use. ZST puts an end to the hassle of retensioning the chain after the initial break-in period, when most chain stretch occurs. For racers, this can mean going several race weekends without a single chain adjustment. You also get the confidence of knowing that a chain with ZST will stay within wear tolerances throughout its entire service life. ZST is standard on the 530ZZZ chain, and available as an option on some MVXZ series chains.

SPRING CLIP LINK TYPE 42
This link is a good compromise of installation and the safety level, as it is much more resistant to fatigue than the slip fit connecting link type 26. It should be used only for low power applications on motorcycles having low displacement (max 400 cc) or for short distances at moderate speed.

EK STANDARD AND OPTIONAL CONNECTING LINKS

Some of the EK chains in this catalog are available with different style connecting links. All are easy to install, however some like the (Rivet-type) link require a special rivet tool. This tool can be purchased separetly

MASTET-RIVET-TYPE

The MLJ is our most dependable connecting link, more commonly used on street machines. Requires special riveting tool to install.

CLIP-TYPE (SEMI-PRESS FIT)

The SKJ is easy to install and very similar to a standard SPJ link. The SKJ's re-designed link plate requires additional pressure to push onto the connecting pins but offers increased dependability and a tighter fit. Comes standard with many motocross, off-road, ATV and drag racing chains. Can be easily installed with a standard pair of pliers.

SLJ: SCREW TYPE

The SLJ is easy to install and a very dependable alternative. Patented mechanism allows easy installment with a wrench and a pair of pliers. Available only as option for selected sealed chains.

SCREW TYPE MASTER LINK

EK's screw type master links do not require any special tools for installation. This unique patented link gives a rivet-like fit, using only an 8mm wrench and a pair of pliers.

HEAVY DUTY DRIVE CHAIN

KMC offers a full selection of motorcycle chains that feature the properties of high performance, durability and accuracy. Under strict controlled manufacturing process, components are incorporated to meet the rigid quality requirements and allow this series of products to offer the best value due to its consistent stability.

SEALED (O-RING) DRIVE CHAIN

Specifically designed with sealed-in lubrication, makes KMC sealed chain work to its optimum life. Superior alloy steel is used and heat-treated to provide best performance in strength. In addition, specially formulated grease contained by using a durable ring in between solid bushing and hardened pin, keeps constant lubrication and eliminates friction during operation. Least wear results in least chain stretch and prolongs its service life.

PRESS-FIT CHAIN LINK TOOLS

Since about 1990, most new chains use press-fit type side plates on the connecting links. On this type of link, the side plate can not be installed properly without the aid of a special tool. The chain manufacturers have decided the press fit adds strength to the connecting link and should always be used. The Motion Pro chain press tools below are designed to install the press-fit connecting links on 520-530 standard and O-ring chains.

- Versatile enough to be used on cam chains or drive chains
- Will break chains from #35 to #630
- For chain 520 and up, it is recommended to grind to rivet head
- Each kit includes 3 pin sizes to fit most chains
- Features new & improved investment-cast-hardened body and redesigned body bolt
- Now the kit includes press places
- Recommended for light to medium duty use

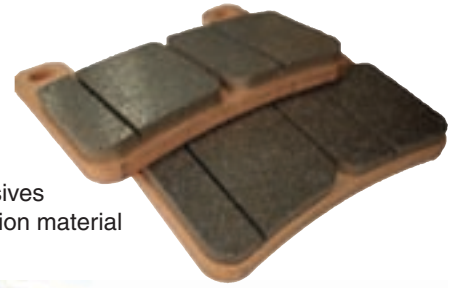
BRAKES

Vesrah®



SINTERED METAL PADS

- An excellent, economical choice for replacing OEM sintered metal brake pads
- Pad consists of 50-60 percent copper combined with carbon, ceramic, tin and abrasives
- Iron backing plate is plated with copper to make it a stronger bond with the pad friction material
- Powerful stopping power in wet or dry conditions
- Excellent initial pad bite, lower lever effort and minimal pad bed-in time required
- Can be used with stainless steel rotors

PROX BRAKE PADS

ProX sintered metal brake pads! The ProX brake pads are produced under a very strict sintering process. In this sintering process metallic particles are fused together in combination with heat and pressure.

Sintered brake pads in general have superior material properties which very well resist high temperatures during heavy braking and offer greater durability over organic brake pads. The ProX sintered brake pads offer strong controllable brake power in combination with long life. The pads are designed to come as a softer compound front pad and little harder compound pad for the rear pads.

A complete range of sintered brake pads for MX, Dirtbike and ATV is available from ready stock!

SIMPLE KIT DESIGNED TO "HELP" REDUCE FRONT AXLE BREAKAGE THAT CAN BE CAUSED BY OVERSTEERING AND BINDING FRONT AXLES WHILE TURNING "FULL LOCK" UNDER POWER...ESPECIALLY IN REVERSE.

NOTE: THE RANGER MODELS AND THE RZR 900 XP ARE EXCELLENT CANDIDATES FOR THIS KIT AS THEY ARE MOST PRONE TO FRONT AXLE BREAKAGE OCCURING AT FULL LOCK STEERING, BUT THIS KIT IS "CHEAP INSURANCE" AND HELPS PREVENT EXPENSIVE AXLE BREAKAGE ON ALL MODELS LISTED ABOVE.

NOTE: A SLIGHT REDUCTION IN TURNING RADIUS WILL BE EXPERIENCED.

HIGH LIFTER LIFT SPRING COMPRESSION TOOL

If you've ever tried to change Lift Springs by hand, you know it can be tricky. The Spring Compression Tool can be a BIG HELP! This tool compresses the spring down to a size to make it easier to complete installation on the OEM shock. Easy to assemble and breaks down for storage. The Spring Compression Tool is essential for spring jobs.

HIGH LIFTER ATV LIFT KITS GET UP TO 2 MORE INCHES OF GROUND CLEARANCE!

For every model, the lift kit is a simple bolt-on system that comes with all of the necessary brackets, bolts and complete instructions. The lift kit design lowers the front A-arms. In addition to the increased ground clearance, the space between the fenders and tires is also increased. The lift also allows larger tires to be installed by reducing tires rubbing fenders and mud flaps. As with any lift kit, C.V. joints will operate at a slightly increased angle, which will increase maintenance requirements and wear.

The front lift brackets are precision welded from ¼" American-made steel, while the rear plates are crafted from 3/8" American-made steel. Each part in the kit is precision CNC laser cut, CNC bent, and CNC machined - a guarantee that your kit will fit just like our engineers designed it to be. In addition to the heavy-duty steel used in our brackets, our research and development team crafted new offset sway bar linkage that allows us to achieve additional lift without removing the sway bar. When combined with the heavy duty heims on the offset sway bar link, we're able to achieve a 4" lift using stock axles - something the competitors cannot do!

The front lift brackets are precision welded from ¼" American-made steel, while the rear plates are crafted from 3/8" American-made steel. Each part in the kit is precision CNC laser cut, CNC bent, and CNC machined - a guarantee that your kit will fit just like our engineers designed it to be. In addition to the heavy-duty steel used in our brackets, our research and development team crafted new offset sway bar linkage that allows us to achieve additional lift without removing the sway bar. When combined with the heavy duty heims on the offset sway bar link, we're able to achieve a 4" lift using stock axles - something the competitors cannot do!

KAWASAKI A-ARM UPGRADE

The All Balls A Arm Upgrade Kit takes care of a weak OE design. The OE design uses (2) spherical bearings per side to carry the side load of the ATV. Once they get sloppy the seals begin to move away from the frame boots allowing water and dirt to get into the assembly. All Balls use (6) Delran shoulder bushings. Each bushing carries a portion of the load. The design outlast the OE by a significant margin.

HOW TO CLEAN WHEELS

- **Probably the single biggest mistake when cleaning wheels is to use industrial cleaners, which can contain harsh abrasives. Mild soap and warm water is sufficient for routine cleaning.**
- **After cleaning chrome-plated wheels, you can apply a non-abrasive wax or cream to prevent surface corrosion. If you have clear-coated wheels, skip this step.**
- **Don't let tire cleaners come in contact with your wheels, and try not to spray cold water on hot wheels.**
- **If you go to the car wash, don't use steam cleaners or strong chemicals on your wheels.**
- **To brighten up your polished wheels (wheels without a clear coat finish) use a polishing cleaner.**
- **To sustain this great look, apply some wax to keep the weather out.**

WHEEL SPACER KITS

WIDE TRACS BITE MORE RUT!

The Wide Tracs are designed to move ATV wheels slightly out from the hubs and shocks.

There are several major benefits provided by Wide Tracs:

1) They extend wheel width for greater stability & increased safety. Riders of tall ATVs will feel much more comfortable on side hills with the wider base provided by Wide Tracs.

2) They provide mud tires a fresh "bite" at the side of ruts instead of the ATV simply driving down the deepest part of the center of the ruts where previous riders have been. So the problem of getting stuck by being "high centered" is reduced.

3) They allow the installation of larger, aftermarket tires without rubbing shocks, struts or exhaust systems. Machined from aircraft grade 6061 billet aluminum and use grade 8 studs. No OEM studs are required to be removed from the ATV and stud extenders are not used. Wide Tracs bolt to existing studs and the wheel is then bolted to the grade 8 Wide Trac Stud furnished. Strongest available design and are comparable to automotive grade wheel adapters. Wide Tracs available in all popular bolt patterns in 1" and 1.5" widths.

Utility WideTracs in 4/110 bolt pattern are designed permitting the installation of wheel center caps, an option that is not provided by any competitor product.
1) They extend wheel width for greater stability and increased safety, they provide mud tires a fresh "Bite" at the side of ruts. 2) They reduce the problem of getting stuck by being "high centered". 3) They permit installation of larger tires without rubbing shocks, struts, or exhaust systems.

Sport Wide Tracs are designed to move ATV wheels up to an even 1.5" out from the hubs and effectively extend the width between the tires. Extended wheel width greatly increases stability and safety at higher speeds and in off-camber (side hill) situations.

THESE KITS WILL FIT THE FRONT OR THE REAR AS LONG AS THE BOLT PATTERNS ARE THE SAME.

IMPORTANT NOTICE

After installing Ride-On TPS Motorcycle Formula sealant into your tires you may notice a slight vibration until the sealant has warmed up and distributed evenly in your tires. This process usually takes 2 to 5 miles. Please DO NOT attempt to rebalance tires after the installation of Ride-On TPS Motorcycle Formula. Ride-On TPS is a balancing compound. Ride-On TPS will act as a balancer and will result in erroneous readings from a dynamic spin balancer that does not compensate for tire deflection, weight of the bike, brakes, or other suspension components. Ride-On is TPMS friendly, however it is not recommended for use in 2009, 2010, and 2012 Honda Gold Wings as their TPMS Sensors are not hermetically sealed.

BALANCE

With one installation of Ride-On, lead weights become a thing of the past. While Ride-On works in conjunction with traditional weights, you won't need them anymore. Ride-On is specially formulated to hydrodynamically balance high-speed tires and dampen road noise and vibrations that cause a rough ride. The great thing is Ride-On will continue to adjust and literally rebalance your tires as you ride for the legal life of the tires. So go ahead, pop off those wheel weights, shine your wheels, and enjoy the smoothest ride you have ever experienced on your bike.

SAFETY FIRST

With Ride-On TPS tire sealant, your tire literally fixes itself! If your tire is punctured, the centrifugal force of the rotating tire and the internal air pressure force Ride-On into the hole, sealing it virtually instantly. Since it helps eliminate porosity leaks that cause tires to deflate over time, your tires stay properly inflated, last longer, your bike handles better and gets more miles per gallon.

WORKS IN TUBE AND TUBELESS TIRES

Ride-On TPS eliminates 85-95% of flats in tubeless tires from objects up to 1/4" (1/8" for tube tires) that penetrate the contact patch of the tire. Since puncturing objects often tear tubes, Ride-On's efficiency in tube tires is reduced to 55-65%. If the puncturing object remains in the tire, it is vital to remove it as soon as possible to prevent further injury to the tire or tube. Our company takes the position that any repair in a motorcycle tire should be treated as temporary.

ACF-50 ULTIMATE CORROSION PROTECTION

NEW PRODUCT

Kills existing corrosion and prevents new

Easy and quick to apply

"ACTIVE" for up to 12 months

Contains no wax, silicone, teflon or water

As close to ZERO CORROSION as nature will allow

Proven chemistry for Powersports. It will make maintenance and cleaning the bike or quad easier and save you money. It will also help prevent surface, structural and electrical corrosion related failure thereby increasing reliability and the bike's/quad's value.

HOW IT WORKS:
ACF-50 chemically treats metal using advanced polar bonding technology. It forms a "hydrophobic" film as it removes moisture from the metal surface. When applied it forms an 'Active' ultra-thin clear film that will kill any existing corrosion cells and will protect your bike or quad against new corrosion forming. It contains no water and is approved for electrical switches and connectors. It will create a "water resistant" film in all these parts. ACF-50 has a strong capillary action so will creep into all the areas that moisture can; actively pushing out moisture and replacing it with protection. Use ACF-50 anywhere, except the brakes, on your bike or quad including the engine and exhaust. Safe on paintwork, most rubbers and brings up black plastic trim a treat.

Excellent lubricant and penetrant

Approved for use on electronics and engines

Non-drying, ultra thin, clear film

All year round service spray

Very economical

Protects • Penetrates • Lubricates!

MR. FUNNEL

FLO TOOL

REMOVES WATER FROM FUEL

The Fuel Filter Funnel by Mr. Funnel is a heavy-duty, anti-static, and fast flow funnel with built-in filter technology. When fuel is poured through the Fuel Filter Funnel, water and debris will not pass through the filter's fluoropolymer-coated stainless steel filter. Only filtered fuel flows through to your engine, improving its efficiency, durability, and proper operation. The sump area collects the deflected water and debris for proper disposal. The Fuel Filter Funnel by Mr. Funnel will filter gasoline, diesel, heating oil, kerosene and 2-cycle mixed gas.

What Model Do I Need?

The Mr. Funnel Fuel Filter comes in four different fast-flow models (See below). Models differ mainly on flow rate. If your need is to transfer five gallons or less of fuel, then the F1 and F3 are for you. If you are transferring more then 5 gallons, then the F8 and F15 are right for you. Our F15 is our fastest flow model at up to 15 gallons per minute! This model can also be used at a fuel pump. Get your Mr. Funnel Fuel Filter today, and keep your engine running smooth!

GRUNGE BRUSH™

Chain and gear cleaning has never been faster or easier! Scrub the chain with the horseshoe shaped bristles at one end of The Grunge Brush™ to clean all four sides of the chain. Use the long bristles on the other end of the brush to clean components like sprockets, derailleurs, cranksets, brakes and pedals.

Regular component cleaning prevents premature wear and tear on chain and sprockets, eliminates chain skipping caused by dirt and grunge, and assures smooth operation of drivetrain and brakes.

The Grunge Brush™ can be used dry or for deep cleaning action, use it with Citrus Bike Chain Degreaser or Multi Bike Degreaser, by simply spraying degreaser onto the chain or directly onto bristles. Grunge Brush™ scrubbing action, coupled with a Finish Line bike degreaser, will leave your drivetrain looking like new

Popularity of these four models allows greater production economics without sacrifice of quality and we pass these savings on to you. The 400 Series clutches have more contact surface than most competitors. The 400 Series clutch has built-in staying power. Almost 3-3/4 square inches of steel friction material engagement shoe surface assures positive pulling power as long as the R.P.M. is in full contact range. There's no slipping when you need the "go-power". The 400 Series clutches have continued performance even when they were partly destroyed in torture tests. Bearings have been almost completely worn through by sand and the 400 Series continued to function.

TIPS FOR PROPER BELT ADJUSTMENT USING 6" OR 7" DRIVEN UNITS

1. Select belt for nearest approx. shaft setting.
2. Check belt tension. Belt should be at its highest point in the driven pulley flanges. Remove outer half of driven clutch. Squeeze belt down and pull forward as shown. Position engine so that 1/8" to 3/16" of clearance is provided around clutch bushing/hub. NOTE: By increasing the spring tension of the torque system...the power ratio of the system (driver and drive) is held longer at higher engine rpm's before it is overcome by driver. To shorten the time required for the driven member to attain ratio, DECREASE the amount of spring tension of the torque cams. This will allow the rpm of the drive clutch to move power ratio of the driven unit at a faster rate in a lower rpm.

MAX-TORQUE PULLEY CLUTCHES

Pulley has a 3.20" O.D. and the clutch drum is 4.2" O.D.
