CLUTCH SLIDER SHIM KITS

NEW PRODUCT

Clutch springs are in constant motion, subjected to compression, expansion, torque, vibration and distortion.

One way to help minimize all the force and keep the springs acting properly and free from binding is to allow the ends of the spring to move freely within the capture area inside the clutch also called the spring pocket.

By placing a spider shim on each end of the spring, it is allowed to slip when required within the spring pocket preventing binding on the spyder or clutch cover. The spring will remain straight and true.

The kits include two lubricity shims and three additional zinc-plated shims for precision tuning.

Other companies in the market selling the same kits have shown each washer increases
the spring and clutch engagement speed by 40-50 rpm.

COMET 108 4-PRO

- Go for the gold with Comet's 108 4-Pro clutch
- Added fourth load-bearing member increases roller and button life
- These race clutches are for high-performance applications ONLY
- Clutch uses four clutch weights to greatly enhance tunability
- To determine arm, add weight of three arms used in 108 EXP, add 14%, then divide by four; this will be the new arm weight to use
- Arms can be used in sets of two to better zero-in on desired weight
- Uses same springs as 102-C and 108 EXP clutches
- Captivated tower allows shouldered cover bolts to virtually eliminate tower spreading
- Each features a new bushing in the movable face and redesigned fixed face for increased durability

IMPORTANT NOTE: These clutches are for racing use only. For calibration, contact a high performance specialist or Comet Industries.

COMET 94-C DUSTER

SIMPLICITY AT ITS FINEST PERFORMANCE AT ITS BEST
THE FINEST "EVERYDAY CLUTCH KNOWN YET FOR SNOWMOBILES.

The 'DUSTER' is the best clutch yet for any snowmobile application. When you compare the Comet Duster to any other clutch - even including the 102C - the overall features of the cost, weight, simplicity, ease of maintenance, endurance and performance, no other clutch can compare. For use on engines up to 440cc.

• Costs less than you would ever expect to pay for a good clutch • Outperforms clutches costing twice as much • Simple in construction, to install, to calibrate • Doesn't require constant maintenance - put it on and forget it's there • Will last for a long, long time - probably longer than your sled • There's a DUSTER for almost every application - regardless of belt top width or crankshaft sizes.

206094 261.95 E

UNIVERSAL

30mm 1:10 flush tapered bore. Adjusts to belts 1-3/16" thru 1-1/2" wide. Comes with spacer installed for 1-1/4" belt. Contains six 211477 pucks and 205583 orange spring. Since the majority of snowmobiles, including those with Spirit, Kohler, CCW. JLO, Hirth, Tohatsu, Kawasaki, Sachs, Fuji, etc., usually have a 30mm 1:10 tapered crankshaft, this is the most popular Duster clutch. For models that have other crankshaft designs or specific requirements such as ring gear bosses and oil pump drives see other clutches listed below.

211493 242.99 E

UNIVERSAL W/RIBBED COVER

The ribbed cover and matching pucks make this clutch more durable in higher load and higher temperature conditions. Same clutch as the 206094 except that it comes with 205828 spacer kit installed to accept both 1-3/16" and 1-1/4" belt. Contains (6) 211377 pucks and 205583 orange spring.

206098 261.95 E

ROTAX (Threaded)

7/8" - 14 threaded 'Rotax' bore. For 1-3/8" wide belts. Contains six 205918 pucks and 205847 blue spring. Larger, but older Ski Doo snowmobiles require this bore.

206097 261.95 E

ROTAX (Threaded)

3/4" - 16 threaded 'Rotax' bore. For 1-3/16" wide belts. Contains six 205918 pucks and 205858 pink spring. Older and smaller Ski Doo snowmobiles require this bore size.

206096 261.95 E

POLARIS (DEEP BORE)

30mm 1:10 tapered 'deep' Polaris bore. For 1-3/8" wide belts. Contains six 205918 pucks and 205583 orange spring. For Polaris snowmobiles only - 1972 and later - equipped with Polaris/Fuji engines whose crankshaft PTO extends into clutch approximately 2".

This cover is designed for use in high load, or heat conditions to stop rotation of the movable face during high load conditions. In the past, there have been instances of puck melt down in this situation. *IMPORTANT! Only the matching ribbed pucks can be used with the ribbed cover. See listing above for cross reference from smooth to ribbed pucks.*

ENGAGEMENT THEORY

While many of the engagements above are the same or nearly so, they are obtained via different combinations of spring and initial collective puck mass. Great differences will result however at higher operating speeds. Though 'pounds of compression' at 2-5/16" height may be similar, each spring color has a different compression rate. The stronger a spring is, the greater the peak RPMs it will tend to allow ... and centrifugal mass (force of the pucks) must be considered. Of two similar engagements, the one which is obtained with a greater initial collective puck mass will yield the better belt pressure, though it will not turn as high peak RPMs as the other.

Actual tensions of springs vary from poundages and rates listed herein which are only COMET spring tension objectives. Certified spring tensions would cause springs to be significantly more expensive. Industry standards for springs permit an initial variance of ± 10%.

To "pre-load" these springs for greater initial tension, up to 3 spring shims (part #203849) may be used with most of them. "Bottoming out" of a spring coil upon coil even once will hasten its deterioration so avoid using 3 shims if the "bottoming out" condition should result. * : Most popular models of springs used on the market.

REFERENCE CHART FOR 102C / 108C / 108EXP / 108-4 PRO CAM ARMS

(listed by Gram Weight)

ALL CAM ARMS ARE PRICED & SOLD EACH • Comet arms are available for all 102C / 108C / 108 EXP / 108 4-PRO Torque Converter • If you require cam arms for a 1993-94 108 EXP with a 5/16" pivot bolt, it will be necessary to purchase cam arms listed here and push bushings out.

*Arms with an asterisk (*) are supplied from Comet only w/special performance bushing, factory pre-installed. Kit # 208342 contains 3 replacements of this bushing.

***Actual gram weights of arms vary from weights listed herein which are only Comet arm weight objectives. Certified part weights would cause arms to be significantly more expensive. The variance may occasionally exceed 2 grams per arm and is a result of greater or lesser density, one part to another - a result, in turn, of the sintered metal manufacturing process used in arm construction.

Gates G-Force:
The Genius of Continuous Evolution

Developed by the World's Leader in Belt Innovation and Technology, Gates G-Force Belts Feature:

- Dynamometer testing proves G-Force belts outlast other high-performance belts by as much as 5 times*
- Equivalent OE performance and durability at a reduced cost
- OE constructed drop-in belt with no clutching adjustments
- Tested under extreme conditions in controlled environments as well as race vehicles
- Matches OE belt shift curves and pulley speed ratios
- Proprietary measuring technology assures exact fit
- Construction utilizes double and single cog configurations to match OEM belt designs maximizing heat control and flexibility

* Based on lifetime comparison of ATV belts with 29.5 lb. ft. (40Nm) loading,two-point dynamometer testing.

XTREME *For the Ride of a Lifetime!*

Built for tough rider demands and hyper sled action. This belt offers extra long wear and dependability. Equally at home in deep powder or hard pack conditions.

See The Difference ... Feel The Results!

The Ultimax tradition of quality and innovation continues with the next generation of snowmobile drive belts. Everything about an Ultimax belt is designed to deliver performance and dependability. With specially formulated rubber compounds and extra strong aramid cord, Ultimax is designed for the rider who refuses to settle for second best! The Ultimax family of snowmobile belts includes Max, Pro and XS.

XS PRO THE INCREDIBLE Max

BENEFITS OF PRECISE BELT LENGTH:

- Enhances efficiency of the variable-speed drive system
- Eliminates excessive friction and tension preventing drive damage caused by short belts, which wears belts and bearings
- Assures highest speed ratio, and prevents loss of top speed
- Exacting belt length tolerances minimize system wear and avoids excess slippage

Knowledgeable snowmobilers agree - the drive belt of choice for high performance is Ultimax XS. XS is designed for high horsepower sleds and delivers superior performance and longer belt life. XS features a specially formulated rubber compound found in no other snowmobile belt. Tests prove that XS transfers more power and runs cooler. For high performance sleds, capture the power with Ultimax XS.

Ultimax 3 has evolved into Ultimax Pro. The new Pro belt features a thicker cross section so more surface area contacts the clutch. This means less slippage over a broader speed range for quicker acceleration. The new cog design dissipates heat and aids flexibility. Cooler running belts mean better performance and longer lasting belts. Run cool, run long, run fast with Ultimax Pro.

Max2 is now known simply as Max. The Max belt is designed for general service machines under 500cc. The new Max has an improved cog design for greater flexibility and cooler running. The new thicker Max has added strength that provides longer belt life.

This belt powers more snowmobiles than any other aftermarket drive belt in the world! Added flexibility of the new double cog design runs cooler and lasts longer. Each belt meets exacting tolerances, using only the best rubber compounds and a tough ARAMAX® cord. Expect longer life on virtually all general service machines.

Heat build-up in drive belts costs horsepower. The double cog design and thicker cross section of our Ultimax®3 belt dissipates heat and aids flexibility. Cooler running belts - over 10 degrees cooler than flat-top designs - mean better performance and longer lasting belts. Better flexibility cuts energy loss, allowing more horsepower transfer from the clutch to the secondary. More surface contacts the clutch. That means less slippage over a broad speed range for quicker acceleration.

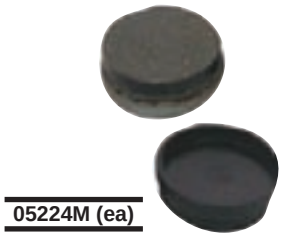
SPI BRAKES

SPI Continues to offer the best in Aftermarket performance braking components. When looking for brake pads, the key thing to remember is the coefficient of friction rating for that pad. This is a 2 letter rating system (see graph below). The first letter is the cold temp coefficient rating and the second letter is the hot temp coefficient. The higher the letters, the higher the coefficient of friction.

SPI SEMI-METALLIC PADS

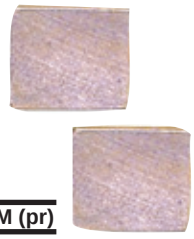
Our semi-metallic brake pads and shoes are composed of a non-asbestos, semi-metallic carbon kevlar aramid fiber from Dupont.

DOT RATING	COEFFICIENT OF FRICTION (C.F.) AT 250F & 600F	GENERAL APPLICATIONS
FF	0.44-0.45 AT BOTH TEMPS 0-22% FADE POSSIBLE AT 600F	THIS PAD IS WELL SUITED FOR MOST CONDITIONS. IT HAS A MINIMAL FADE AT HIGH TEMPERATURES, AND IS GOOD FOR PERFORMANCE APPLICATIONS.



SPI FULL-METAL PADS

Our full-metal pads are composed of copper, carbon, tin, lead and other metallic elements.



DOT RATING	COEFFICIENT OF FRICTION (C.F.) AT 250F & 600F	GENERAL APPLICATIONS
GG	0.45-0.50 AT BOTH TEMPS FADING VERY RARE	THIS PAD IS GREAT FOR MOST CONDITIONS, AS IT WILL BED QUICKER ON WORN DISCS. THIS RATING IS GREAT FOR PERFORMANCE APPLICATIONS.

SLP HIGH PERFORMANCE CARBON/KEVLAR BRAKE PADS

SLP introduces the new high performance Carbon/Kevlar GG-rated compound for snowmobiles. The SL 452501 compound is a semi-metallic material with Kevlar and Carbon composites, which works in any condition, cold or hot weather and max coefficient of friction is UO.59. Minimal break-in time required. It is composed of carbon and basalt fibers as well as Aramid fibers and other special materials. WHY RUN A CAMOPLAST TRACK?

Because Camoplast tracks give you confidence. That's why.

Camoplast has a history of more than fifty years of molded track engineering, manufacturing, and marketing. Unlike companies who produce tracks as a secondary business, Camoplast maintains a tight focus on rubber track technology. And with over 10 million tracks manufactured, nobody has moved more snowmobiles down the trail - or the race track - than Camoplast. In fact, over ninety per cent of the world's snowmobiles ride on Camoplast rubber.

With a full service Research and Development Center and a modern, fully-staffed Test Facility, Camoplast continues to push the boundaries of rubber track engineering by developing proprietary materials and processes to make better, more efficient tracks.

Camoplast's Circular Press Technology is the latest development of the original track molding machine invented by our company many decades ago. This technology translates the activities of our R & D team and track testers into consistent, high-quality tracks for snowmobilers around the world. So get the confidence that comes with having a Camoplast track under your sled.

HOW TO MEASURE A TRACK

- **PITCH:** The distance between the center of the one drive hole, drive lug or cleat to the center of the next on the same side.
- **DRIVE HOLE CENTER DISTANCE:** The measurement between the center of the drive hole to the center of the opposite drive hole on the same pitch.
- **NUMBER OF / QTY / WINDOWS:** The number of drive holes, lugs or cleats in one row.
- **TRACK LENGTH:** Determined by multiplying the pitch length by the number of pitches or cleats.

NOTE: To calculate track length, multiply Pitch x qty = length.
Example: 2.52" x 48 = 120.94" (length) 2.52" x 54 = 136.08" (length)

Find your size track and refer to Camoplast tracks to find a track to fit your snowmobile.

SLP TRACK / HIFAX ANTI-WEAR PADS

Increased performance! These wear pads reduce drag and wear on Hifax. Designed for the new Polaris and Ski-Doo Long Tracks that are not equipped with windows or wear clips on each cross bar. Without these anti-wear pads you will have higher Hifax temperature, more drag against the track and even depositing rubber on the Hifax. Eventual damage to the track is also possible.

HIPERFAX TEFLON SLIDES

HIPERFAX Inc.

For Arctic Cat, Polaris, Ski-Doo, Yamaha. Our Hiperfax Slide has been designed, engineered and developed right here in Maine by an avid snowmobiler with the knowledge of what it takes to produce a slide that will give longer life, less drag, better fuel mileage, and more speed and here it is! Priced and sold in pairs.

TIPS FOR INSTALLATION: 1) If track clips are sand pitted, rusted or have plastic adhered to them, clean thoroughly with sandpaper or other appropriate method. 2) Tracks must have clips on every crossbar (not all new tracks have them). 3) Run 50-60 miles in good snow conditions to break in the Hiperfax for best results.

WARRANTY: Warranty is limited to defects in workmanship or material. Improper installation, suspension adjustment, track adjustment, too many studs on the track, poor quality track clips, lack of track clips or normal wear are not covered by warranty.

COMMON REASONS FOR PREMATURE WEAR TO ANY SLIDES, (STOCK HYFAX OR HIPERFAX): 1) Track is too tight at lower speeds and just right at high speeds (this is caused by either a worn out track or more often than not, overstudding). 2) Pitted track clips gouge the slide 3) Track clips are missing. 4) Another possible reason for excessive heat being created and causing premature wear is small track windows. Many tracks are offered with windows so small that not enough airflow is getting through and onto the slide. Airflow can make a significant difference in any slide's temperature. Ideally, the larger the windows, the better.

ATTENTION: Hiperfax that are a little shorter than stock lets the track transition from the flat surface of the rail to the wheel radius easier than when cut to the factory length. Many track extension kits will leave a 6" void (no rail or slider) between the rear of the slider and the rear idler wheels. Many racers cut their slides shorter than their rails to enhance performance.

SLIDES TO MATCH YOUR SNOWMOBILE * MUST BE CUT TO SIZE

These slides are made with Gar-dur® U.H.M.W.P.E. Polyethylene and have the best fit available anywhere. Rest assured we supply only the best, made in the USA and priced right too!

Slides with graphite available. Graphite lubricates the slide rail allowing for better performance and longer life. Graphite is especially important with today's high performance sleds. Don't be fooled by cheaper "graphite" slides that are actually only colored with lamp black or contain less graphite. Quality costs extra but yields better results. Don't settle for less. Slides sold each.

HIGH PERFORMANCE RECREATIONAL SNOWMOBILE SHOCKS

A NEW GENERATION OF SHOCK ABSORBERS DESIGNED SPECIFICALLY FOR THE SNOWMOBILE ENTHUSIAST!

8200 SERIES

A PROVEN DESIGN THAT MEETS THE PERFORMANCE CHALLENGES OF TODAY'S MACHINES

- Patented Low Fade Orifice Carrier Piston: Provides a seamless transition from a smooth low speed ride, to firm, well-controlled high speed handling
- Gas Cell: Low pressure gas cell eliminates foaming of the oil, providing consistent performance throughout the life of the shock absorber
- Microcellular Urethane Bumper: Stays soft even at the lowest temperatures and eliminates hard bottoming
- Ice Scraper*: Scrapes ice off the rod, which prevents moisture from entering the shock and contaminating the oil.

8600 SERIES

- Compression Screw Adjust: 300% range of adjustability developed to suit the individual rider and to adapt to changing conditions
- Patented Low Fade Orifice Carrier Piston: Provides a seamless transition from a smooth low speed ride, to firm, well-controlled high speed handling
- Anodized Aluminum Body: Superior corrosion resistance, lightweight, and new millennium look, providing maximum appeal
- Gas Cell: Low pressure gas cell eliminates foaming of the oil, providing consistent performance throughout the life of the shock absorber
- Ice Scraper: Scrapes ice off the rod, which prevents moisture from entering the shock and contaminating the oil.

9200 SERIES

- One Piece extruded Aluminum Cylinder: combines solid strength, greater gas retention and light weight performance
- Microcellular urethane bumper: stays soft even in extreme conditions to prevent hard bottoming.
- Large Diameter IFP O-Ring: increases the allowance of higher gas pressure without compromising the seal for the separation of gas and oil mixing with one another.
- Teflon Piston and IFP Wear Bands: prevents scoring of cylinder, as well as providing long life consistency in damping.
- Super Finished 1/2" Chrome Rod: provides not only an improved surface finish for longer seal life but a thicker coating of chrome that is resistant to pitting and corrosion.

COMPRESSION SCREW ADJUST: 300% range of adjustability developed to suit the individual rider and to adapt to changing conditions
ANODIZED ALUMINUM BODY: superior corrosion resistance, lightweight and new millennium look, providing maximum appeal
GAS CELL: eliminated foaming of the oil, providing consistent performance throughout the life of the shock
MICROCELLULAR URETHANE BUMPER: stays soft even at the lowest temperatures, eliminating hard bottoming
ICE SCRAPER: scrapes ice off the rod, preventing moisture from entering the chock and contaminating the oil
ONE PIECE EXTRUDED ALUMINUM CYLINDER: combines solid strength, greater gas retention and lightweight performance
RAISED VALVE SEAT PISTON: continuously flushes discs and orifices of potential contaminates; eliminating the possibility of undesirable damping
LARGE DIAMETER IFP O-RING: increases the allowance of higher gas pressure without compromising the seal for the separation of gas and oil mixing with one another
SOLID TEFLON PISTON AND IFP WEAR BANDS: prevent scoring of cylinder, as well as providing long life consistency in damping
SUPER FINISHED CHROME ROD: provides not only an improved surface finish for longer seal life but a thicker coating of chrome that is resistant to pitting and corrosion. **NOTE: Features dependent on specific Series of Shock**

- Approximately 1 lb lighter for each shock
- Patented oil porting and integrated cylinder design
- Twin gas chambers provide dual rate spring adjustability
- Smaller cylinder controls the remaining travel of shock stroke
- Lightweight responsiveness for high-speed handling
- Remarkable control due to plusher initial spring rate
- **Each kit includes two ski shocks and a pump**
- AIR 2.0 springless shock absorbers use a patented oil porting design and internal cylinder design that incorporates twin gas chambers that provide dual-rate spring rate adjustability
- External gas chambers that are more susceptible to air leakage are eliminated with this design
- Larger, main 47mm internal aluminum shock cylinder can be set in a range of 50 - 100 psi to allow adjustment of front end suspension sag and for an initial lower spring rate in the first 1 in. to 1.5 in. of shock stroke
- Second 37mm hardened chrome shock cylinder doubles as the damper rod; lubricates shock shaft seals and serves as an ice scraper device
- The internal gas chamber within the 37mm cylinder can be set in a range of 120 - 220 psi to allow for a stiffer spring rate for the remaining shock stroke
- Provides excellent feel and responsiveness for high-speed handling and rough trail riding, plus a high level of rider comfort

SHAPER BAR sold as a pair - order 1

The "Shaper"™ Bar will take wearbar design and performance to a new level. This new bar offers a unique shape that provides much better turning than conventional bars and offers a 20% weight savings too! The concave side profile on the "Shaper"™ Bar grabs and holds snow rather than allowing snow to slip by like other wearbars. While the shape of this bar improves the turning radius of your sled in the snow, the large 60 degree carbide provides great control and wear on hard surfaces.

SLT POWDER PRO SKI

ULTIMATE IN LOOSE SNOW PERFORMANCE FOR MAXIMUM FLOTATION AND PRECISE STEERING CONTROL

- Deep snow steering ability is dramatically increased
- Low speed snow mobility is also substantially increased
- Exhibits a unique multi-level keel design to provide aggressive steering ability with minimal arm effort over a broad range of conditions
- The upper keel aids the lower keel when maneuvering in deep powder or loose conditions
- The sidewall surface area of the upper keel adds to the sidewall surface area of the lower keel to provide optimum steering control in deep powder or loose snow conditions.
- Powder control wings aid in maintaining proper ski attitude (keeping skis parallel to the snow) in deeper powder snow. Also, due to front suspension camber one side of the ski will lift (approximately 8°) in a turn. The powder control wing compacts the snow under it rather than allowing it to wash over the top. This dramatically increases the Powder Pro ski's ability to turn in loose snow. Control while sidehilling is greatly increased due to the additional steering control. These skis also help eliminate the tendency that long, aggressive tracks have to push through the corners. Recommended for mountain/powder use, this ski works amazingly well in snowcross type conditions.

SKI-Z ICE-DEFLECTORS

SKI-Zs

650270	59.95	G

- SKI-Z's attach to the rear of any ski in minutes for absolutely awesome cooling performance on hard-packed snow.
- SKI-Z's keep your sliders lubricated AND cool your engine by deflecting the snow that is disturbed by the steering runners as they pass over the snow surface.
- SKI-Z's are precisely designed to place the deflected snow spray in the critical points it is needed most to both vastly increase slider life and keep your engine cool at all times.
- SKI-Z's operate on a movable pivot to virtually eliminate any tendency to increase steering effort or affect direction control. Also, when used in reverse, the same pivot allows the SKI-Z's to rotate 360 degrees to avoid breakage.
- SKI-Z's are made from high-carbon spring steel for ultra-durability and performance. Large-lobed lock-nut knobs allow for easy install and the neoprene tension washer insures that the SKI-Z's "stay put".
- Installed as a pair, SKI-Z's are left/right sensitive and include easy to follow illustrated instructions. Drill a 5/16 inch hole in each ski and install.

DURAFLEX™ SOLO™ SNOWBIKE ICE SCRATCHER

- Utilizes super durable Duraflex™ cable design
- Will not affect steering
- Reversible
- Universal Fit
- Stores on top of ski using provided clip
- One bolt mounting

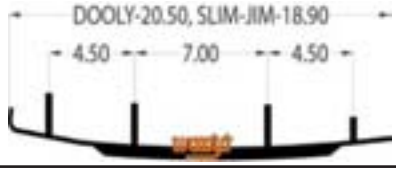
WOODY'S DOOLY RUNNERS

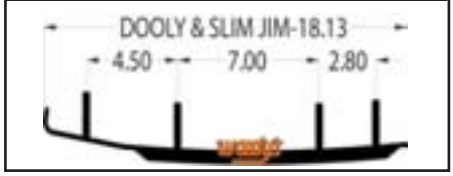
PLEASE NOTE: SOLD PER PIECE / ORDER ONE (1) FOR ONE SKI

DOOLY RUNNER



The Dooly™ has two 7/16" Flat-top runners mounted on a plate for each ski. The four contact lines on the snow surface will help decrease darting of your sled as it makes its own groove in the trail. When in a turn, only one of the Dooly™ bars will be in contact with the snow or ice. Therefore, a Dooly™ with 6" of carbide on both runners will have the same turning power as a single runner with 6" of turning carbide. The Dooly™ is available in 4", 6", and 8" of 60° turning carbide for Arctic Cat, Polaris, Ski Doo and Yamaha snowmobiles. Each Dooly™ is packaged individually.

SLIM JIM™ DOOLY™



Performance Dooly is 31% Lighter and More Aggressive - Woody's new Slim Jim™ Dooly. The original Dooly was designed to reduce the front skis jerking as they hunted for the track of the snowmobiles that had gone before. This reduction in front end darting allowed you to regain confidence in your riding abilities because you could trust your front end control traction. Assertive riders need to be able to read traction as they maneuver through changing trail configurations and ground conditions. The new Slim Jim™ Dooly embodies the anti-dart and adds superb cornering control. The Slim Jim enhanced cornering capabilities allow you to take it to the edge of traction and feel comfortable enough to bring it there and back when and if you want to. That level of riding can only be achieved by those who are able to trust their traction. The Slim Jim™ Dooly is available in 4", 6" and 8" of 60° turning carbide for Arctic Cat, Polaris, Ski-Doo and Yamaha snowmobiles through the Woody's runner line.

STUD BOY SHAPER BARS

The "Shaper"™ Bar will take wearbar design and performance to a new level. This new bar offers a unique shape that provides much better turning than conventional bars and offers a 20% weight savings too! The concave side profile on the "Shaper"™ Bar grabs and holds snow rather than allowing snow to slip by like other wearbars. While the shape of this bar improves the turning radius of your sled in the snow, the large 60 degree carbide provides great control and wear on hard surfaces.

Concave sides provide better turning performance.

FEATURES:

- 20% lighter than round bars
- Provides much better turning in trail conditions
- Unique shape offers extra control and steering in snow
- Zinc plated to resist corrosion and eliminate paint in threads
- ISR Sno-cross legal

WARNING: Dangerous loss of snowmobile control will result if a proper balance of studs and carbide wearbars are not installed when using these carbide wearbar products. Proper track studding is mandatory for safe use of these products.

STUD BOY DEUCE BARS

The “Deuce” Bar takes dual type wearbars to a new level. Utilizing the design benefit of the original “Shaper” Bars’ concave side this new dual runner provides better training than other dual runners and still provides the benefit of “no darting” while cruising down your favorite trail. Available in 4.5”, 6” and 9” of 60 degree cutting carbide to fit popular current snowmobiles.

Concave sides provide better turning performance.

FEATURES:

- One piece design
- Still turns like a performance runner
- No DARTING - makes its own groove
- Eliminates dual runner type drag - no “top end” loss
- Won’t clog with snow, ice or rocks or snag obstacles like other dual runners
- Long life - very durable
- Individually packaged

WARNING: Dangerous loss of snowmobile control will result if a proper balance of studs and carbide wearbars are not installed when using these carbide wearbar products. Proper track studding is mandatory for safe use of these products.

Introducing the revolutionary SnowTracker. The SnowTracker allows snowmobile enthusiasts to rediscover the pleasures of the sport of snowmobiling, by offering a solution to the constant darting of the snowmobiles on the trails. The SnowTracker corrects this problem. After years of prototyping and field trials, the SnowTracker has evolved into the ultimate piece of equipment needed to correct darting problems. The concept of the SnowTracker is quite simple, an inverse U made of hardened steel equipped with a Teflon rectifier and a carbide runner. Installing the SnowTracker is a breeze. SnowTracker is comprised of three parts, the stabilizer with its two 1/16" thick blades, the Teflon rectifier which prevents the snow and the ice from sticking to the blades, and the carbide runner. This design gives you 3 blades that cut through snow & ice, which enables the snowmobile to carve its own tracks thus avoiding falling into a pre-existing track.

TIPS FOR PROPER BELT ADJUSTMENT USING 6" OR 7" DRIVEN UNITS

1. Select belt for nearest approx. shaft setting.
2. Check belt tension. Belt should be at its highest point in the driven pulley flanges. Remove outer half of driven clutch. Squeeze belt down and pull forward as shown. Position engine so that 1/8" to 3/16" of clearance is provided around clutch bushing/hub. NOTE: By increasing the spring tension of the torque system... the power ratio of the system (driver and drive) is held longer at higher engine rpm's before it is overcome by driver. To shorten the time required for the driven member to attain ratio, DECREASE the amount of spring tension of the torque cams. This will allow the rpm of the drive clutch to move power ratio of the driven unit at a faster rate in a lower rpm.

SINGLE SPROCKET SELF CONTAINED

Popularity of these four models allows greater production economics without sacrifice of quality and we pass these savings on to you. The 400 Series clutches have more contact surface than most competitors. The 400 Series clutch has built-in staying power. Almost 3-3/4 square inches of steel friction material engagement shoe surface assures positive pulling power as long as the R.P.M. is in full contact range. There's no slipping when you need the "go-power". The 400 Series clutches have continued performance even when they were partly destroyed in torture tests. Bearings have been almost completely worn through by sand and the 400 Series continued to function.

S100 Cycle Care Products

S100 TOTAL CYCLE CLEANER

If you've been using a bucket of car suds or a quick detailer, chances are you been missing the most important and threatened places on your bike… those hidden nooks and crannies where dirt can hide. Why isn't that ok? Dirt traps moisture and the moisture can't dry out. The result is corrosion, rust and tarnish and you can't even see it happening! S100 Total Cycle Cleaner works differently by creeping to find the hidden soils you can't see, then penetrating and loosening them so a sharp stream of water can remove them. The result is a bike that is clean everywhere, not just where can see. Simply put, it's better for your bike. (You don't have to tell your friends it's quick too.)

S100 SHINE-ENHANCING CLEANSER AND S100 CARNAUBA PASTE WAX

Ready to get the ultimate shine? Experts agree that waxes with cleaners in them are compromise products, that the cleansing and waxing steps must be done separately, so that's what we've done. Use our two step S100 Cleanser and S100 Paste Wax system, we can virtually guarantee you can put your bike in a show! Get your bike clean and dry, then begin with our S100 Shine-enhancing Cleanser. Professional painters and detailers agree that proper surface preparation is fundamental to getting the ultimate shine. The S100 Cleanser gently removes water spots, small swirl marks and imbedded road film to set up the surface for the ultimate shine, all without scratching even sensitive clear coats! Now you're ready for the ultimate wax job with our S100 Carnauba Paste Wax. Free of abrasives and cleaners and made with a unique blend of carnauba (the world's hardest wax) and beeswax, you will be amazed at the depth of shine and darkening of dark colored surfaces. And we've eliminated two common annoyances, powdering during rubout and white stain residues on plastics and rubber! And it's so easy to apply and remove, some bikers tell us it's as easy to use as a liquid!

S100 DRYING TOWEL

There's not much point in getting a bike washed quickly, if you can't get it dried quickly. That's why we introduced the amazing S100 Drying Towel. More drying power than a natural chamois, yet it never gets stiff so it's always ready to use. Lint free, it stores in its own plastic pouch so it's ready to pull out of the saddlebag. Made from 100% biodegradable materials without using CFC's or formaldehydes.

S100 WHEEL CLEANER

Sometimes those road wheels need some extra cleaning power to get them back to that "like new" look. And, worse yet, that brake dust (it contains metallic particles!) can become corrosive if allowed to stand for awhile. If you find that brake dust build up is hard to keep up with, we recommend you try our S100 Special Performance Gel Wheel Cleaner. It provides up to 50% more cleaning power than our Total Cycle Cleaner thanks to the clinging power of its unique gel formulation. Spray on and allow to stand (you control the amount of cleaning you need, see directions on bottle), then rinse thoroughly. Neither acid, nor lye-based like cheaper products, S100 Wheel Cleaner provides complete surface safety for any type of wheel or wheel finish, including those tricky anodized finishes.

S100 CORROSION PROTECTANT

No matter how clean you keep your bike, you always have to be on the lookout for that dreaded "enemy number one", corrosion. Unless you live in the desert, humidity, salt air, spring road salt and plain old pollution threaten your bike's "precious metals". That's why we developed S100 Corrosion Protectant. Just spray on a clean, dry bike (or into a cloth) and rub into the areas you want to protect, those sensitive areas like fork tubes, case covers and wheels (and don't forget those hidden areas you can't reach.). You'll find that S100 Corrosion Protectant won't rub off easily in the rain and so its protection really lasts. It even dramatically out-performed a famous so called "corrosion fighter", so this is really the way to protect your investment!

Important note: This is the perfect product for winter lay up and long term storage. Spray directly on all sensitive areas and allow to dry.

Cycle Care Products S100

S100 FINISH RESTORER AND S100 POLISHING SOAP

No matter how well you take care of your bike, sometimes things happen that need "intensive care". Some overly stubborn road film, a few ugly stains, or plain old dulling and corrosion are things a biker can face. No problem! For small areas, our S100 Finish Restorer is the perfect solution. It can renew tarnished metals (aluminum, stainless, chrome etc.) to a brilliant shine, even often take small scratches out of plastics. It rubs out easier than ordinary polishes and doesn't come with that ugly ammonia smell, either! No wonder Motorcyclist Magazine called it "the nearest article to a miracle finish maintenance product…"

For larger areas, our breakthrough polishing product S100 Polishing Soap is the perfect weapon in that fight against dulling and tarnishing. This just might be the world's fastest way to polish! Forget the slow, tedious two finger polishing you know and step up to a handful of polishing power. Based on a technology used by European silversmiths, this clay and soap based polish is applied with a wet sponge (included). Wet the sponge, drag across the Polishing Soap and scrub the surface. Rinse with a hose or let dry and buff out. No smelly, oily residue and a speed that will amaze you. Pipes, fork tubes, wheels, case covers etc. get shined up in a fraction of the time it used to take. Economical, too. Outlasts a couple of tubes of ordinary polish. (Not recommended for painted or anodized surfaces.). Dozens of uses around the home are described in the booklet included.

S100 DETAIL + WAX

OK, we know there are some times when your bike isn't really that filthy, maybe just a bit dusty, rain-spotted or covered with bugs. We've got something for that, too. S100 Detail + Wax removes that dust, those spots, and the bug residue. And its unique carnauba and beeswax ingredients replace them with a "gangbusters" shine. Just think of it as a wash and wax in one! It's easy to use, too. Just spray a bit on a soft cloth or onto the bike's surface and rub to a high gloss. Pack a can in the saddlebag and you're ready for a dusty road or that surprise rain shower. No wonder an independent test rated S100 Detail + Wax "... the most consistent performer of all".

ACF-50 ULTIMATE CORROSION PROTECTION

Kills existing corrosion and prevents new

Easy and quick to apply

"ACTIVE" for up to 12 months

Contains no wax, silicone, teflon or water

As close to ZERO CORROSION as nature will allow

Proven chemistry for Powersports. It will make maintenance and cleaning the bike or quad easier and save you money. It will also help prevent surface, structural and electrical corrosion related failure thereby increasing reliability and the bike's/quad's value.

HOW IT WORKS:
ACF-50 chemically treats metal using advanced polar bonding technology. It forms a "hydrophobic" film as it removes moisture from the metal surface. When applied it forms an 'Active' ultra-thin clear film that will kill any existing corrosion cells and will protect your bike or quad against new corrosion forming. It contains no water and is approved for electrical switches and connectors. It will create a "water resistant" film in all these parts. ACF-50 has a strong capillary action so will creep into all the areas that moisture can; actively pushing out moisture and replacing it with protection. Use ACF-50 anywhere, except the brakes, on your bike or quad including the engine and exhaust. Safe on paintwork, most rubbers and brings up black plastic trim a treat.

Excellent lubricant and penetrant

Approved for use on electronics and engines

Non-drying, ultra thin, clear film

All year round service spray

Very economical

Protects • Penetrates • Lubricates!

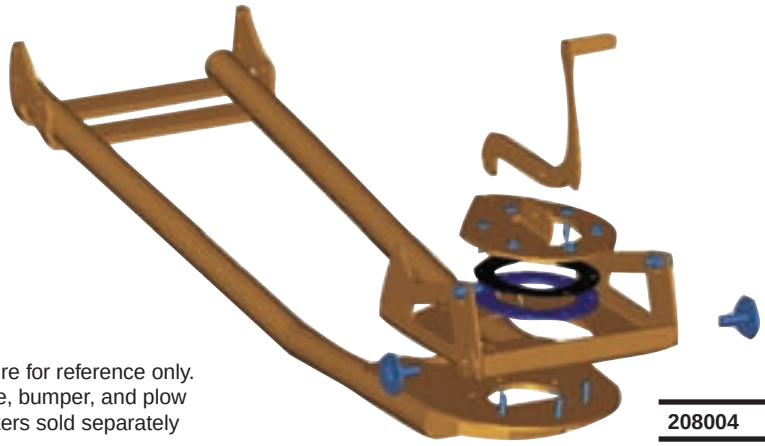
WARN STANDARD CENTER MOUNT ATV PLOW SYSTEM

ATV STEP 1) PICK YOUR PLOW BLADE ATV



- Warn Plow blades are made from high-strength low alloy steel with 3/16" outer blade ribs to provide superior strength and rigidity. These ribs also allow a weight reduction that gives you better handling and performance while plowing.
- Warn uses large bushings - 6" in the base and 1-1/2" in the blade ribs - to dramatically reduce wear and absorb the shock of plowing. A large, replaceable wear bar and adjustable gravel skids make fast work of difficult jobs.
- And, with the Warn Integrates Accessories Systems, you can change blade widths without buying new mounting kits, lift mechanisms or base/tube assembly.

UNIVERSAL MANUAL LIFT

One kit will fit all makes and models. The Lift Handle attaches to the plow frame, not the ATV. When the plow is removed, so is the handle. The Hand Lift will raise the blade higher and easier than any other brand. The front lifting point is adjustable so you can choose how high and easy the blade will raise. The handle itself is padded, height and width adjustable for operator comfort. New, stronger 3/8" short lift rod, no longer 5/16"!, New cable lift design. Longer stroke bell crank provides better lifting action.

MR. FUNNEL

FLO TOOL

REMOVES WATER FROM FUEL

The Fuel Filter Funnel by Mr. Funnel is a heavy-duty, anti-static, and fast flow funnel with built-in filter technology. When fuel is poured through the Fuel Filter Funnel, water and debris will not pass through the filter's fluoropolymer-coated stainless steel filter. Only filtered fuel flows through to your engine, improving its efficiency, durability, and proper operation. The sump area collects the deflected water and debris for proper disposal. The Fuel Filter Funnel by Mr. Funnel will filter gasoline, diesel, heating oil, kerosene and 2-cycle mixed gas.

What Model Do I Need?

The Mr. Funnel Fuel Filter comes in four different fast-flow models (See below). Models differ mainly on flow rate. If your need is to transfer five gallons or less of fuel, then the F1 and F3 are for you. If you are transferring more then 5 gallons, then the F8 and F15 are right for you. Our F15 is our fastest flow model at up to 15 gallons per minute! This model can also be used at a fuel pump. Get your Mr. Funnel Fuel Filter today, and keep your engine running smooth!

Popularity of these four models allows greater production economics without sacrifice of quality and we pass these savings on to you. The 400 Series clutches have more contact surface than most competitors. The 400 Series clutch has built-in staying power. Almost 3-3/4 square inches of steel friction material engagement shoe surface assures positive pulling power as long as the R.P.M. is in full contact range. There's no slipping when you need the "go-power". The 400 Series clutches have continued performance even when they were partly destroyed in torture tests. Bearings have been almost completely worn through by sand and the 400 Series continued to function.

TIPS FOR PROPER BELT ADJUSTMENT USING 6" OR 7" DRIVEN UNITS

1. Select belt for nearest approx. shaft setting.
2. Check belt tension. Belt should be at its highest point in the driven pulley flanges. Remove outer half of driven clutch. Squeeze belt down and pull forward as shown. Position engine so that 1/8" to 3/16" of clearance is provided around clutch bushing/hub. NOTE: By increasing the spring tension of the torque system...the power ratio of the system (driver and drive) is held longer at higher engine rpm's before it is overcome by driver. To shorten the time required for the driven member to attain ratio, DECREASE the amount of spring tension of the torque cams. This will allow the rpm of the drive clutch to move power ratio of the driven unit at a faster rate in a lower rpm.
